12 Steps to Keeping Foods Safe

1 Wash hands often during preparing and cooking food.

2 Clean kitchen counters and other surfaces that come in contact with food with hot water and detergent or a bleach solution.

3 Use a clean meat thermometer to make sure meat, poultry and casseroles are cooked all the way through.

4 Thaw frozen foods in the refrigerator.

5 Do not leave perishable foods at room temperature for more than 2 hours.

6 Keep hot foods hot -- above 140∞F.
Keep cold foods cold -- below 40∞F.

7 Don't cross-contaminate
- -- use a different cutting board for raw products
- -- separate raw meat from other foods in grocery cart

8 Choose canned goods that aren't dented or bulging.

9 Check your refrigerator temperature often -- is it below 40∞F?

10 Never taste leftover food that looks or smells strange -- when in doubt, throw it out!

11 Don't eat raw or partially cooked eggs -- not even cake batter or cookie dough!

12 Use a different spoon for stirring and tasting.

K-STATE Kansas State University

Kansas State University Agricultural Experiment Station and Cooperative Extension Service, Manhattan, Kansas. Kansas State University, County Extension Councils, Extension Districts, and the U.S. Department of Agriculture cooperating.
