

# Levels of Community Change

## A Game to Teach the Social Ecological Model and Policy, System, and Environment Change

**Time:** 20-50 minutes

### Equipment and Supplies

- Game mat or area delineated with lines or ropes. (See Set-up.)
- Targets (shaded areas, buckets, boxes, as appropriate)
- Health behavior scenarios
- Objects to toss to targets (balls, bean bags, coins, etc.) and timer (optional)

### Do Ahead

- Review activity instructions
- Select appropriate scenarios and insert in envelope
- Prepare game area

### Intended Audience

Adults or youth ages 14-18

### Lesson Objectives

Participants will . . .

- Identify levels of community change that influence health behaviors (based on social-ecological models).
- Identify factors that influence health behaviors at each level.
- Recognize the relative difficulty and potential impacts associated with strategies at each level of community change.
- Explore ways to target numerous levels of change.

## BACKGROUND

Social ecological models recognize that individual choices and behaviors are influenced by numerous, interrelated factors across multiple levels, suggesting that health promotion strategies should target individual change (education), *and* social, organizational/ physical environment, and policy changes.

## WHAT TO DO

### Set-up

Levels of Community Change can be played in a small, indoor area or in a large, outdoor area. Generally speaking, the set up involves these steps:

1. Lay out a set of four concentric circles to represent the levels of community change, also known as the social ecological model.
2. Choose four targets appropriate for the size of your circles. Ideally, the targets get smaller in size as they move out to larger circles.
3. Label the targets (beginning in the center circle):
  - Individual level = 1 point
  - Group/Social level = 5 points
  - Organizational level = 10 points
  - Policy/System level = 20 points

### For play in a small or indoor space:

1. Draw concentric circles on a large sheet of paper or form them on the floor with tape or rope. Place a strip of tape about 5 feet from the bottom of the circles.
2. Draw circles as flat targets or choose containers, like boxes or bowls, for three-dimensional targets.

### For play in a large or outdoor space:

1. Create large circles with rope on a grassy area or with chalk on a playground area. A Hula-Hoop or other large ring may be used for the smallest circle. Use a small rope or other marker to create a line for players to stand behind.
2. Choose targets such as 5-gallon buckets or something that is big enough to hold the tossed objects.

## Experience: Setting the Stage

Ask the following questions to help introduce the concept of levels of community change.

1. To what extent do you think factors beyond your own knowledge and preferences affect your eating decisions? A great deal or not much?
2. In what locations do you usually purchase/eat foods?
  - What impacts your own decisions in those places?
  - Who influences which foods are in those locations?
  - What kinds of rules or regulations impact which foods are there?
3. Which factors influence your choice to buy or consume nutritious vs. unhealthy foods? How often are those factors within your control (mostly, sometimes, or rarely)?

Read the descriptions of the levels of community change and a few scenarios. Explain how each scenario fits into one or more levels.

### Level Descriptions

**Individual**—knowledge, skills, attitudes, beliefs, preferences, demographic factors, and personality traits

**Group/Social**—the support or lack thereof provided by friends, family, and peers, as well as social norms and identity

**Organizational**—rules, regulations, guidelines, policies, cultures, and structures in place at institutions where people live, work, worship, and play, including the built environment

**Policy/System**—local, state, and federal policies, laws, and wide-reaching systematic practices

## Experience: Playing the Game

1. Divide into two teams; form two lines behind the line.
2. Have a player select and read a health behavior scenario.
3. After the player's team agrees on the level of community change most needed to address the scenario, the player tries to toss a coin or bean bag from behind the tape into the square at that level.
4. Award points for landing in the correct area; team must justify other levels to get points.
5. Teams alternate taking turns to toss object.
6. Options: Allow an additional chance to toss an object toward the target and score points if the team can describe an action they could actually take related to the scenario. Move the throwing line closer to the target each round. Allow for other creative ways to attain points. Purposely give one team some type of advantage.

## TALK IT OVER

### Reflect

- Why is the individual level target the largest?
- Why is the systems level target farther than the others?
- Why is it worth the most points?
- Are most of your decisions about health behaviors affected by factors at one level, two to three levels, or all four levels of the model? Give examples.
- Did anything else happen that mirrors real life? (Was the playing field uneven, were the rules bent, etc.)

### Generalize

- Why is individual or group change easier to achieve than organizational or policy change? Give examples.
- Which types of change can impact the most people? Which require the most effort from individuals? Which are passive? Give real-life examples.
- Are disadvantaged populations affected differently by some change strategies? Give examples.

### Apply

- Name a health issue you are concerned about. How could you encourage change at each level within your community related to that issue?
- How can community groups promote change at all levels?

## FACILITATOR INSTRUCTIONS

Interested in reaching a large audience with multiple games and facilitators? Check out the Facilitator Instructions available at [ohio4h.org/changegame](http://ohio4h.org/changegame).

Share your game experiences: [smathers.14@osu.edu](mailto:smathers.14@osu.edu)

# Levels of Community Change

## A Game to Teach the Social Ecological Model and Policy, System, and Environment Change

Read the descriptions of the levels of community change and a few scenarios. Explain how each scenario fits into one or more levels.

### Level Descriptions

**Individual**—knowledge, skills, attitudes, beliefs, preferences, demographic factors, and personality traits

**Group/Social**—the support or lack thereof provided by friends, family, and peers, as well as social norms and identity

**Organizational**—rules, regulations, guidelines, policies, cultures, and structures in place at institutions where people live, work, worship, and play, including the built environment

**Policy/System**—local, state, and federal policies, laws, and wide-reaching systematic practices

The CEO of Company X signs a healthy workplace food and beverage pledge to demonstrate a commitment to the health of employees, but hesitates to enforce it because she fears getting complaints.

Community A

In response to an increase in reported falls, a community center offers a fall prevention class for seniors. It teaches them to make changes to their homes, such as adding hand rails.

Community A

A food truck owner posts a sign in his truck window that reads "Because I love you, I do not serve soda, only water, the most hydrating drink."

Community A

A hospital reports a significant decrease in the percent of mothers who choose to breastfeed their newborns.

Community A

A childcare center wants to provide every child with a reusable water bottle to drink from throughout the school day

Community A

Food pantries in your community are laid out so that cakes and chips are usually the first item that clients see when they walk in the door.

Community A

A community pool offers fresh fruit and a few other healthy snack items, but sells them at the concession stand at much higher prices than soda and chips.

Community A

A childcare center adopts a gardening curriculum to teach children about fruits and vegetables in an onsite garden.

Community A

A childcare centers in your area serve only packaged and processed foods.

Community A

Very few children in your community wear bike helmets. A couple of children recently sustained head injuries while riding bicycles.

Community A

Children who attend summer feeding sites in a low-income area lack access to parks and play spaces.

Community A

A farmers' market attains an EBT machine in order to accept SNAP benefits, but residents report they cannot afford transportation to the market.

Community A

A health department program manager realizes that many local preschools are regularly serving sugar-sweetened beverages to children at the centers.

Community A

A survey indicates that families with young children in your community lack the knowledge and equipment needed to cook healthy meals using the produce they receive with their benefits.

Community A

Although a conference planning committee requests water only, the conference hotel puts soda out for every break as part of the "standard contract."

Community A

A convenience store owner believes customers will not purchase fresh fruits and vegetables at the store.

Community A

Sugar-sweetened beverages are marketed at schools on posters and scoreboards.

Community A

Recent research links lack of sleep in children to obesity.

Community A

Your community lacks sidewalks and bike lanes in the neighborhoods around elementary schools.

Community A

A group of local mothers has petitioned employers to provide space for nursing or expressing breast milk in workplaces.

Community A

A local coalition tries to pass a tax on sugar-sweetened beverages, but the beverage association outspends them and defeats the measure.

Community A

Students across your school district report that the food served in their cafeteria is "nasty."

Community A

A high school student got only 4 hours of sleep, so she consumes energy drinks for an energy boost.

Community B

A runner believes that reflective strips looks goofy, so he refuses to wear reflective clothing when running late at night.

Community B

A freshman is in the habit of stopping by a fast food restaurant each day on her way home from school.

Community B

A parent packs school lunches for her child every day and always includes the child's favorite fruits and vegetables.

Community B

Families you work with report that they do not eat meals as a family because of busy or conflicting schedules.

Community B

A middle school basketball team provides only sport drinks, like Gatorade or PowerAde, during games.

Community B

Whenever a group of friends hangs out, they eat potato chips, popcorn, and candy while watching movies and playing video games.

Community B

Pat's friends never wear seatbelts when driving. Pat chooses not to wear a seatbelt when riding with them to avoid feeling out of place.

Community B

A Girl Scout or Boy Scout troop makes sure lights out occur at 10 p.m. each night to ensure that teens get enough sleep.

Community B

A group of high school friends decides to start swimming at their YMCA every weekend.

Community B

For every family gathering your grandma makes and serves her famous cinnamon rolls for dessert.

Community B

Public schools in your county want to serve fresh fruits and vegetables from local farmers, but cannot find affordable products.

Community B

A school has reduced physical education offerings due to budget cuts.

Community B

An apartment complex does not have sidewalks leading to the pool, laundry room, or business office, which encourages residents to drive (rather than walk) to those facilities.

Community B

Your town park holds weekly recreation days at which community kids and teens can participate in soccer, volleyball, and kickball.

Community B

A family living in low-income housing notices unsafe objects and unfamiliar groups of teens in local playgrounds. They decide to keep their children inside to play at all times.

Community B

Companies market sugary snacks and beverages to teenagers in specific ethnic groups.

Community B

Despite signing the Partnership for a Healthier America commitment, a hospital continues to offer sugary soft drinks to patients as their first choice following surgery.

Community B

Laws require drivers and passengers to wear seatbelts to prevent the number of injuries and deaths from accidents.

Community B

Concerns about food waste have increased since a law began requiring public schools to serve healthy meals that include a range of fruits and vegetables each week.

Community B

Your town passes a bill to fund the creation of a new bike path.

Community B

Laws require food companies to list their ingredients on their product labels.

Community B

Your community votes to increase a levy that funds physical education classes at the high school.

Community B

The U.S. Department of Health and Human services releases a series of commercials encouraging youth to get at least 8 hours of sleep each night.

Community B

Your father hates jogging so he refuses to work out.

Youth A

A child loves the taste of sugar, so he eats as many candies as his mom allows.

Youth A

A college student got sick from bad tomatoes once. Now he won't eat tomatoes unless they're in spaghetti sauce.

Youth A

A teenager got only 4 hours of sleep, so she consumes energy drinks for an energy boost.

Youth A

Your mother desires to lose weight, so she has begun exercising 30 minutes a day.

Youth A

A teenage girl learns how to properly read nutrition labels, so she begins doing this each time she buys a snack in the store.

Youth A

A teenage girl is in the habit of stopping by a fast food restaurant each day on her way home from school.

Youth A

You believe that reflective strips look goofy, so you refuse to wear reflective clothing when running late at night.

Youth A

Your parents pack your school lunch every day and always include your favorite fruits and vegetables.

Youth A

Your Girl Scout or Boy Scout troop makes sure lights out occurs at 10 p.m. each night to ensure that teens get enough sleep.

Youth A

Your basketball team provides only sports drinks, like Gatorade or PowerAde, during games.

Youth A

Your 4-H club always includes a physical activity at meetings.

Youth A

Whenever a group of friends hangs out, they eat potato chips, popcorn, and candy while watching movies.

Youth A

You and your friends decide to start swimming at your YMCA every weekend.

Youth A

Your friends never wear seatbelts when driving. You choose not to wear your seatbelt when driving with them because you don't want to feel out of place.

Youth A

At family reunions, your grandma always makes and serves her famous cinnamon rolls for dessert.

Youth A

Public schools in your county decide to serve fresh fruits and vegetables from local farmers.

Youth A

Your neighborhood YMCA installs free water bottle filling stations.

Youth A

Your school has removed physical education from the class schedule due to budget cuts.

Youth A

Your county 4-H requires all youth taking bike projects to wear helmets.

Youth A

Your town park holds weekly recreation days at which community teenagers can participate in soccer, volleyball, and kickball.

Youth A

State Fair project judging begins at 8 a.m. Because you have a 2 hour drive, you wake up early and get only get 4 hours of sleep.

Youth A

Your apartment complex does not have a sidewalk leading to the pool, laundry room, or business office, discouraging walking by residents.

Youth A

The U.S. Department of Health and Human Services releases a series of commercials encouraging youth to get at least 8 hours of sleep each night.

Youth A

Companies market sugary snacks specifically to teenagers.

Youth A

Your town passes a bill to fund the creation of a new bike path.

Youth A

Citizens in a California county vote to place a small tax on beverages high in sugar.

Youth A

Laws require food companies to list their ingredients on the product labels for people to read.

Youth A

Laws require us to wear seatbelts to prevent the number of injuries and deaths from accidents.

Youth A

Your community votes to increase a levy that funds physical education classes at your high school.

Youth A

A law requires public schools to serve healthy meals that include fruits and vegetables.

Youth A

The vendors at your county fair sell only deep-fried foods.

# Levels of Community Change: A Game to Teach About Policy, System, and Environment Change

Carol A. Smathers, MS, MPH<sup>1</sup>; Theresa M. Ferrari, PhD<sup>2</sup>

## INTRODUCTION

Health promotion organizations increasingly encourage multilevel, multisector interventions, because such approaches can produce more widespread and sustainable impacts than individual behavior change efforts alone.<sup>1</sup> Many public health agencies and foundations recommend or require that funded projects include policy, system, and environment (PSE) change activities. Growing numbers of health coalitions and youth advocacy programs inspire members to implement community-level changes. The Cooperative Extension System, which includes the *4-H Youth Development Program*, has adopted a National Framework for Health and Wellness<sup>2</sup> calling for strategies informed by the social ecological model (SEM) principle that behavior is influenced by multiple interacting factors.<sup>3-6</sup> In reality, however, practitioners often lack familiarity with and confidence in applying PSE change strategies or find terms such as *policy change* daunting.<sup>7</sup> Recognizing that educational games convey and reinforce knowledge,<sup>8,9</sup> an interactive game was developed to help practitioners identify various PSE strategies, understand basic tenets of the SEM, and explore ways to initiate PSE changes. Feedback from 94% of 118 nutrition educators who engaged in the game

(n = 111) supports the efficacy of the game in meeting these objectives and points to the feasibility of its use with various groups.

## OVERVIEW

The Levels of Community Change game was initially developed to teach teens serving as healthy living advocates<sup>10</sup> about the SEM. Acknowledging youth advocacy as a promising health promotion strategy,<sup>11,12</sup> the game was intended to provide a fun and engaging way to communicate SEM concepts, illustrate challenges involved in targeting health-related behavior changes at each level, and help teens view themselves as capable of engaging in environment change projects in their clubs and communities. The game's format is based on the experiential learning model, which is a key theoretical framework practiced in 4-H: engage in an experience, reflect on it, and apply what is learned to other situations.<sup>13</sup> The game has been modified for a variety of audiences and used successfully with groups of teens, mixed groups of teens and adults, and professional audiences.

Game materials consist of health behavior scenarios, a large vinyl floor mat, and objects to toss at targets on the mat. The game mat has 4 concentric circles representing levels of the SEM, with square target areas that de-

crease in size and increase in point value as they move out from the center of the model to reflect increased challenges and potential wider, more sustainable impacts (Figure 1). Sets of customized health behavior scenarios developed for specific interest areas include public health, obesity prevention, healthy beverage choices, falls prevention, and local foods (Table 1). With adaptations, the game can accommodate as few as 4 players to >100 (Figure 2). In large groups, 1 game mat and facilitator is needed for every 12–14 players.

The objectives of the game are for participants to (1) identify a variety of influences on health behaviors at 4 levels of community change, (2) recognize the relative difficulty and potential impacts associated with strategies at each level of community change, and (3) explore ways to identify potential interventions targeting various levels of influence on health behaviors. Players read a health-related scenario, decide as a team what aspect of the SEM is represented, and attempt to toss an object onto the target corresponding to the identified level (Table 2). Debriefing afterward ensures that participants grasp the key concepts. Debriefing questions focus on the relative difficulty, potential impacts, and real-life pitfalls associated with strategies at each level of community change (Table 3). These questions can form the basis for ongoing discussions about how to become agents of change for healthier options in communities.

## EVALUATION

To evaluate whether the game met its intended objectives, 111 of 118 professionals attending a nutrition education conference provided feedback after participating in a workshop on PSE change that included the Levels of Community Change game. On a 4-point scale (very helpful, helpful, somewhat helpful, or not very helpful),

<sup>1</sup>Department of Family and Consumer Sciences, Ohio State University Extension, Columbus, OH

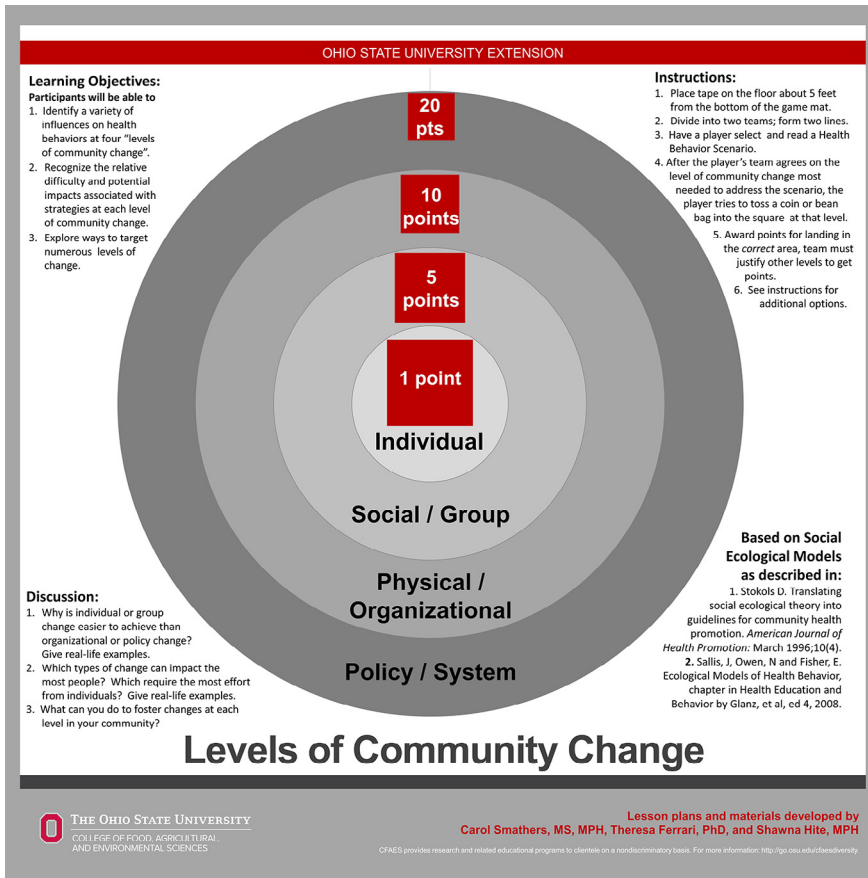

Figure 1. Levels of Community Change game mat.

most rated the game either very helpful or helpful to participants for recognizing real-world challenges and opportunities related to PSE changes (55% very helpful and 37% helpful); identifying how behaviors are influenced across levels (40% very helpful and 49% helpful); exploring ways to initiate promoting policy, system, and environment changes (48% very helpful and 39% helpful); and understanding the basic tenets of the SEM (35% very helpful and 50% helpful). More participants indicated that they thought the game was suitable for professional vs student audiences: *Supplemental Nutrition Assistance Program–Education* program or *Expanded Food and Nutrition Education Program* staff (91%), community health coalitions (89%), public health and nutrition professionals (86%), college students (68%), high school classes (57%), and 4-H groups (49%).

**APPLICATION**

Those who work with professional or teen audiences may find the Levels of Community Change game helpful to introduce the concepts of the SEM to set the stage as part of larger

**Table 1.** Examples of Scenarios Used in Levels of Community Change Game Customized for Specific Health Interest Areas

Level of Change	Interest Area	Scenario
Individual	Healthy beverages	A high school sophomore thinks water tastes bad and drinks a 2-L bottle of cola every day.
Individual	Falls prevention	In response to an increase in reported falls, a community center offers a falls prevention class that teaches seniors to make changes to their homes, such as adding hand rails.
Social/group	Healthy beverages	Your coach insists that all players drink sports drinks before each game to stay hydrated.
Social/group	Obesity prevention/physical activity	Very few children in your community wear bike helmets because those who do are sometimes teased that they are uncool.
Physical/organizational	Healthy beverages	The vending machines at your community center do not have any water, milk, or diet soda.
Physical/organizational	Workplace wellness	The chief executive officer of company X signs a healthy workplace pledge to demonstrate a commitment to the health of his employees, but hesitates to enforce it because he fears getting complaints.
Policy/system	Healthy beverages	A local coalition tries to pass a tax on sugar-sweetened beverages, but the beverage association outspends them and defeats the measure.
Policy/system	Obesity prevention/physical activity	A local school locks up its track and playground during non-school hours.

Note: Some scenarios can fall into >1 level, depending on how they are interpreted.

**Figure 2.** Levels of Community Change game in action with youth and professional audiences.

**Table 2.** Step-by-Step Instructions for Using Levels of Community Change Game as a Teaching Activity

1. Facilitator provides a brief introduction, social ecological model definitions, and an explanation of the rules.
2. Player stands behind tape (placed approximately 5 ft from mat's edge).
3. Player draws a scenario. In discussion with team members, player decides on the level of community change most needed to address the scenario.
4. Player tries to toss an object into the box or square corresponding to identified level. Points are awarded for landing in correct area. If the object lands in another level, the team will get points if they are able to justify how the scenario also fits this level.
5. A second toss attempt is awarded to the player if the team can identify a realistic approach for addressing situations similar to the scenario occurring in their community.
6. Teams alternate selecting a scenario and responding. After each round, the tape is moved closer to the edge of the game mat.
7. Play continues until all scenarios are drawn or time runs out.
8. Facilitator engages the group in debriefing discussion questions.

**Table 3.** Debriefing Questions Used in Levels of Community Change Game to Convey Concepts From the Social Ecological Model

1. In what ways did the game help you to think about factors at different levels that influence individuals' behavior?
2. Why is the individual-level target the largest on the game mat? Why is it worth the fewest points?
3. Why is the policy-level target the smallest? Why is it worth the most points?
4. Why are additional opportunities to earn points awarded for determining realistic approaches?
5. Why does the tape get moved up after each round?
6. In community work, does it sometimes happen that groups aim for a specific level but hit their target through activities at another level? Can you name an example?
7. Did any players get especially creative? How?
8. Are there other analogies that you can make to organizational, program, or coalition-led policy, system, and environment changes?

change initiatives. This interactive activity can supplement online PSE tool kits and trainings for *Supplemental Nutrition Assistance Program–Education and Expanded Food and Nutrition Education Program* professionals.<sup>14,15</sup> Because the game was originally designed for teens and adapted with input from teens, it can be used to familiarize youth audiences with PSE and SEM concepts and help them convey those concepts to others. Game leaders are encouraged to customize the game scenarios to increase the relevancy of the activity to their audiences.

## NOTES

The Ohio State University Office of Responsible Research Practices determined this investigation to be exempt (Study No. 2016E0424). More information about Levels of Community Change game materials, instructions, and scenarios is available online.<sup>16</sup> The material described here was presented at the National Extension Association of Family and Consumer Sciences Annual Meeting on September 15, 2016, in Big Sky, MT, and at the National Health Outreach Conference on May 4, 2017, in Annapolis, MD. Financial support was provided in part by an Ohio State University Community Access to Resources and Educational Services (CARES) grant from The Ohio State University Outreach and Engagement Office. The authors thank Shawna Hite for work on the initial version of the game, and

Jane Wright and the Ohio 4-H Curriculum Team for technical assistance.

# Seven Steps for Policy, Systems and Environmental Change: Worksheets for Action

September 2017

## INTRODUCTION

This *Seven Steps for Policy, Systems and Environmental Change: Worksheets for Action* is a companion to both [Action4PSEChange.org](http://Action4PSEChange.org) and the accompanying *Action for PSE Change: A Training*. The George Washington University (GW) Cancer Center developed these resources to assist comprehensive cancer control (CCC) professionals in planning, designing, implementing and evaluating PSE change initiatives. Each is organized around the seven steps of the PSE change process.

[Action4PSEChange.org](http://Action4PSEChange.org) is an online tool that provides an explanation of each step of the PSE change process and highlights PSE change success stories from CCC programs in states, Washington, D.C., tribes and U.S. Associated Pacific Islands/territories. The site also provides an extensive list of resources that you may wish to consult in conjunction with the worksheets in this guide.

The free, web-based *Action for PSE Change: A Training* thoroughly explores PSE change, from its evidence base to a full-length case study. The training provides background information on the PSE change process, a PSE action plan template, real-world examples and suggests theoretical and evaluation approaches to help grow the PSE change evidence base.

The training is available at the GW Cancer Center's [Online Academy](#). The Online Academy offers a number of training and education opportunities for health care and public health professionals to help advance patient-centered care and evidence-based public health practice.

## HOW TO USE THIS RESOURCE

This guide is intended to be a companion resource to the web-based training and online tool. You can use the worksheets in this guide as a starting point for thinking through your PSE change strategy or as a brainstorming tool for your team members.

If you need technical assistance or would like more information, please contact us at [cancercontrol@gwu.edu](mailto:cancercontrol@gwu.edu).

## ACKNOWLEDGEMENTS AND CONTRIBUTORS

### GW Cancer Center Staff Contributors

Liza Fues, JD	Patient Advocate
Allison Harvey, MPH, CHES	Senior Manager, Health Care Professional Education
Mohammad Khalaf, MPH	Senior Manager, Comprehensive Cancer Control
Gema Lane, MPA	Project Manager, Cancer Survivorship
Mandi Pratt-Chapman, MA	Associate Center Director for Patient-Centered Initiatives & Health Equity, GW Cancer Center
Rhea Suarez	Health Education & Training Coordinator
Aubrey Villalobos, MPH, MEd	Director, Cancer Control & Health Equity
Kelli Vos, MSPH	Communications Manager

The GW Cancer Center would also like to acknowledge the contributions of Elizabeth Franklin, LGSW, ACSW (Former) Director, Policy & Engagement and Tasha Moses, MPA.

### Content Reviewers

Edolem Ikerdeu	Director, Palau Cancer Council of the Pacific Islands, Republic of Palau
Judith Muller	Manager, Alaska Native Tribal Health Consortium Comprehensive Cancer Program

## ABOUT THE INSTITUTE FOR PATIENT-CENTERED INITIATIVES AND HEALTH EQUITY AT THE GW CANCER CENTER

The mission of the Institute for Patient-Centered Initiatives and Health Equity at the GW Cancer Center is to foster healthy communities, prepared patients, responsive health care professionals and supportive health care systems through applied cancer research, education, advocacy and translation of evidence to practice. Our vision is a cancer-free world and health care that is patient-centered, accessible and equitable.

The GW Cancer Center is a collaboration between the GW Hospital, the GW Medical Faculty Associates, and the GW School of Medicine and Health Sciences to expand GW's efforts in the fight against cancer. The GW Cancer Center also partners with the Milken Institute School of Public Health at GW, and incorporates all existing cancer-related activities at GW, serving as a platform for future cancer services and research development.

## ABOUT THE COMPREHENSIVE CANCER CONTROL PROJECT

In 2013, the Institute for Patient-Centered Initiatives and Health Equity (formerly the GW Cancer Institute) was awarded a 5-year cooperative agreement to work with CDC to design and implement comprehensive, high-quality training and technical assistance to CCC

programs and their partners to implement cancer control activities. To learn more, visit [www.CancerControlTAP.org](http://www.CancerControlTAP.org).

## BACKGROUND

Health outcomes are the result of a complex combination of factors including not only biological or genetic causes but also race, ethnicity, gender, sexual orientation, socioeconomic status, education level, mental health and geography (U.S. Surgeon General, n.d.). Health problems are influenced by policies, systems and environments (PSE) that make it easier to sustain unhealthy behaviors than to foster healthier choices.

Individual lifestyle choices are only one part of our ability to live healthy, productive lives. A mix of social, economic and physical factors drives health disparities, or “differences in the incidence (new cases), prevalence (all cases), mortality (death), and burden of diseases and other adverse health conditions that exist among specific population groups” (National Institutes of Health, 2002). Despite progress in cancer prevention, screening and treatment, a disproportionate share of uninsured, medically underserved and minority populations across the United States are impacted by cancer (American Cancer Society, 2009). Health disparities are nearly impossible to address without a multi-level, ecological or PSE change approach that considers the opportunities and challenges facing all people in the community.

Following several reports in the early 2000s from the National Academy of Medicine (NAM) focused on an increased recognition of social determinants of health and social ecological approaches to population health (NAM, 2000, 2002, 2004), CDC convened the National Expert Panel on Community Health Promotion, and the PSE change approach was born (Liburd & Sniezek, 2007; Comprehensive Cancer Control National Partnership, 2015). To achieve quicker change and foster healthier communities, one NAM report recommended policymakers and public health professionals (NAM, 2004):

- Support community and neighborhood empowerment
- Establish strategic partnerships
- Educate stakeholders and decision-makers
- Identify community leaders and build on existing resources
- Gather and use relevant data
- Maintain a focus on evaluation throughout the PSE change process
- Share successful strategies with other communities

The PSE change approach includes and addresses these types of recommendations. By adjusting the policies, systems and environments that impact our daily lives, we can create

settings that allow for sustainable, healthy behaviors. PSE change facilitates embedding healthy options in the fabric of our society.

Traditional Public Health Behavior Change:	PSE Change:
<ul style="list-style-type: none"><li>• Time limited touch point</li><li>• Often results in only short-term behavior change</li><li>• Traditionally individual level</li><li>• May be done in isolation or not part of a larger plan</li><li>• Short-term effort (typically 1-3 years)</li><li>• Less sustainable (usually funding-dependent)</li></ul>	<ul style="list-style-type: none"><li>• Ongoing</li><li>• Produces longer-term behavior change over time</li><li>• Community/population level</li><li>• Part of an ongoing plan and engages multiple stakeholders</li><li>• Long-term</li><li>• Sustainable</li></ul>

Adapted from Food Trust (2012).

## STEPS OF THE PSE CHANGE PROCESS

As you proceed through each step of the PSE change process, use the corresponding worksheet to help you think through your strategy. You may wish to provide copies of each worksheet to your team members in order to prepare in advance of a team meeting. Alternatively, you may prefer to use a whiteboard or flip chart to brainstorm ideas in a group setting.

Please note that while these steps follow a linear order, that is not necessarily the case for the PSE change process. In practice, individuals can approach the steps in an order that makes sense, keeping in mind that they may overlap. You should revisit the steps regularly throughout the PSE change process to stay current with changing conditions.

In this guide, you will find a worksheet devoted to each of the following PSE change steps:

### **Step 1: Engage - Build partnerships and engage the community**

PSE change initiatives involve a wide variety of people, agencies and organizations from all corners of the community, working toward a common goal. As with other public health initiatives, partnerships are vital to any PSE change process. They make it possible to divide the work so it can be completed more efficiently. Working with diverse partners also strengthens efforts by capitalizing on each member's strengths and reaching each member's constituencies.

### **Step 2: Scan - Perform environmental scans**

An environmental scan can help determine what actions should be taken within the broad health issue you want to address. The environmental scan allows you to identify gaps, trends and factors affecting the political, social, economic and legal contexts to help you understand the drivers of PSE change.

### **Step 3: Assess - Identify priority areas**

After you have scanned the external environment surrounding the health issue you want to address, you now understand the drivers and challenges of your potential PSE change initiative. However, you need evidence to support your position and the development of SMART objectives. Assess and review available data to determine which specific aspect of the health issue can be potentially resolved or lessened through PSE change. Your state, tribe or territory cancer control plan is a great place to start.

### **Step 4: Review - Assess feasibility of interventions**

Once you have developed SMART goals and objectives, review the feasibility of your proposed PSE change intervention to determine if your goals and objectives can be implemented. Work with stakeholders to develop a strategy for turning an idea, goal or objective into action, including a discussion of the political climate and readiness. Ensure that key champions are involved to provide support.

### **Step 5: Promote - Promote awareness, communicate and educate**

You are ready to communicate the need for your PSE change effort. Communicate to all stakeholders the need for PSE change prior to implementation to help lessen potential resistance. Incorporate various forms of media to educate and build support from stakeholders and the public, when appropriate.

### **Step 6: Implement - Take action**

The first five steps of the PSE change process lead to the implementation of your PSE change intervention. Carry out PSE change activities that link directly with goals and objectives in your cancer control plan.

### **Step 7: Evaluate - Measure your success**

Evaluate the processes employed during the implementation of your PSE change intervention, as well as the short-term, intermediate and long-term outcomes expected to result from the intervention. Evaluation can provide quantitative and qualitative data to demonstrate the change(s) that occurred.

# ACTION FOR PSE CHANGE WORKSHEET

## Step 1: Engage – Build Partnerships and Engage the Community

Use this worksheet as you consider how to identify and engage partners necessary for PSE change.

### Why are partners integral to PSE change? Consider the following:

- Why should others care about PSE change?
- How does PSE change impact others in the community? - Identify your stakeholders
- What can be accomplished as a group that cannot be accomplished by individual people or organizations?

### How will you identify and evaluate your potential partners? Consider the following:

- Which stakeholders (decision makers, patients, caregivers, employers, providers, researchers, etc.) should be included in the PSE change process? Why?
- Are there any other partners who should be brought into the conversation? - Consider non-traditional partners like businesses, industry or non-health care organizations
- Why does (or should) each stakeholder care about the issue(s)?
- Will any stakeholders be opposed to the change? Why?
- Do the stakeholders' missions align to accomplish the shared goal(s)? How?
  - If not, what common ground do you all have?
- What resources (tangible and intangible) do you need that stakeholders can provide?

### How can you hold stakeholders accountable? Consider the following:

- Have you identified a leader (either an individual or a committee/group) to hold the team accountable and drive the process forward?
- Which model of leadership will work best for the PSE change initiative?

### Notes:

# ACTION FOR PSE CHANGE WORKSHEET

## Step 2: Scan – Perform Environmental Scans

Use this worksheet as you consider how to identify factors affecting the external environment to determine the actions necessary for potential PSE change.

**Assuming you have identified a broad health issue you want to address, how will you determine the appropriate actions for PSE change? Consider the following:**

- What is the ultimate purpose of the PSE change?
- What is your "ask"? - Identify an area of interest
- What level of PSE change is necessary (local, state, federal or institutional)?
- Is the environment conducive to the PSE change? - Consider public opinion and identify community champions

**What factors should you think through when conducting an environmental scan as you plan your PSE change effort? Consider the following:**

- Who is already attempting PSE change efforts?
  - Identify additional partners as well as supporting or opposing stakeholders you could bring to the table
- What is the current political context? What is the nature of the relationship between community stakeholders? - Look for grey literature (non-commercial or academic literature) such as reports, white papers, government documents or any non-academic publications
- What is the current economic context?
  - What economic impact (positive or negative) could the PSE change effort have on community stakeholders?
  - What programs are being funded and who is funding them? - Look at funding announcements
- What is the current social context? - Think about social determinants of health, such as housing, education and income, and how demographic factors may play a role in the health issue
- What is the current legal context? - Look at trends related to proposed and passed legislation to understand potential windows of opportunity and challenges associated with the legislative process
- What opportunities and threats are posed by the above gaps, trends and factors in the environment? - Summarize the challenges identified in your scan

**Notes:**

---

---

---

---

---

# ACTION FOR PSE CHANGE WORKSHEET

## Step 3: Assess – Identify Priority Areas

Use this worksheet as you consider how to assess existing data that will help you determine which specific aspect of the broader health issue can be addressed through PSE change.

### What issue(s) are important and why?

- Is this issue more relevant for any particular subpopulation in your community, tribe, territory or state?

### What data do you need to support your position on the issue(s)? Consider the following:

- Where can you obtain data to support your position?
- Are there data that can be used in opposition to your position?
- What kind of data can you obtain (qualitative, quantitative, peer-reviewed journals, trusted primary sources, etc.)? – Ensure that the data are evidence-based, objective, reliable and valid
- Are data/evidence available regarding the potential costs and benefits of the PSE change?
- Are the data compelling? Can you tell a story to make your case?

### What are your SMART (specific, measurable, attainable, relevant and time-bound) goals and objectives for your PSE change initiative? Consider the following:

- What is the rationale for each of the goals and objectives?
- What is your timeline for accomplishing these goals and objectives? Why?
- What would happen if the issue(s) is/are not addressed?
- What are the milestones along the way to reach the goals and objectives?
- What would success look like? – This sets you up for Step 7: Evaluate
- What happens if you achieve success?

### Notes:

---

---

---

---

## ACTION FOR PSE CHANGE WORKSHEET

### Step 4: Review – Assess Feasibility of Interventions

Use this worksheet as you consider project feasibility - it will help you develop a strategy for turning your ideas, goals and objectives into action.

**Are your goals and objectives feasible in the current economic and political environment? Consider the following:**

- What authorizing environment(s)/setting(s) must you work within?
- Who are the gatekeepers and decision makers in this environment/setting?
- Do key stakeholders hold assumptions or biases that need to be addressed or mitigated? How might you do this?
- Has someone already taken a stand on the issue(s)? If so, what happened?
  - How might this impact your PSE change efforts?

**What is your group's capacity to implement this PSE change? Consider the following:**

- What resources exist to promote and implement your PSE change?
- Are there well-resourced opponents who might attempt to counter your promotion and implementation efforts?
- What resources do you still need to accomplish your goals and objectives?
  - Will your activities cost money? If so, where will that money come from?
- What are the barriers to implementing the PSE change? Can they be overcome?
- Now that your PSE change activities are better defined, are there additional partners who might have resources or be able to help the group overcome unforeseen or anticipated barriers?
  - How can you bring them to the table?
- Do the original goals and objectives need to be redefined based on this information?

**Notes:**

---

---

---

---

---

---

---

---

# ACTION FOR PSE CHANGE WORKSHEET

## Step 5: Promote – Promote Awareness, Communicate and Educate

Use this worksheet as you consider how to communicate and frame the need for a specific PSE change.

**How can your message be best framed for each of your stakeholder audiences? Consider the following:**

- What do you want your intended audience to do?
- What do they get out of your intended PSE change? - You're trying to generate buy-in
- What are your intended audience's strengths and how can those be incorporated into your messaging? - Help them feel empowered to work toward the PSE change
- How can you use the information and data obtained in the previous steps to determine what stakeholders need/want to hear and understand?
- What cultural and/or community norms can be incorporated to strengthen the message and make it more relevant for each audience? - Do not make assumptions. Work with gatekeepers to inform your messaging
- Have you checked with community members to get their feedback on the messaging?
  - How will you incorporate their feedback?

**How will you communicate with your stakeholders? Consider the following:**

- How can you best communicate your message so the intended audience understands it? - Consider language proficiency and health literacy
- How can you use the information and data obtained in the previous steps to determine how best to reach your stakeholders?
- Which media platform(s) are best suited to promoting the message for each audience?

**How will you get your promotion effort off the ground? Consider the following:**

- Will you need specific resources in order to communicate your message? - Decide whether you need financial, in-kind, consultation (advice from experts) and/or access (to people, organizations and systems)
  - How will you obtain the resources?
- Do you have partners with communication experience to help lead these efforts?
- Do any partners have large and influential networks to disseminate the information?
- What obstacles may you need to overcome in order to communicate your message?

**Notes:**

---

---

---

---

## ACTION FOR PSE CHANGE WORKSHEET

### Step 6: Implement - Take Action

Use this worksheet as you consider how to carry out your PSE change activities.

**Have you done due diligence to prepare to implement your goals and objectives? Consider the following:**

- Have you developed a detailed PSE agenda and action plan detailing all that needs to take place to meet your objectives?
- Has enough awareness-raising taken place among stakeholders about the issue and the need for PSE change?
- Are stakeholders committed and engaged? - If yes, this will help ensure success
- Are partners committed to maximizing what they can bring to the project?
- Have sufficient resources been established to ensure successful implementation and sustainability of the PSE change effort?

**As you prepare to carry out your planned activities, what is your overall vision for success? Consider the following:**

- What are some potential short-term successes and what do they mean for the overall PSE change process?
- What are some potential long-term successes and what do they mean for the overall PSE change process?
- How will you determine if additional resources are necessary to sustain change?
- How will you continuously engage stakeholders and keep momentum going?
- How will you adapt to a changing environment?
- What would it look like if your efforts were not successful?

**Notes:**

## POLICY, SYSTEMS, AND ENVIRONMENTAL CHANGE RESOURCE GUIDE

---

## PURPOSE OF THE GUIDE

The Policy, Systems and Environmental Change (PSE) Resource Guide is the result of several years of collaboration between the Comprehensive Cancer Control National Partners and select CCC Program PSE demonstration projects. While working together, additional resources were identified to support various phases of the PSE process. The purpose of the Resource Guide is to provide models and tools to assist you with planning and implementing your PSE agenda.

---

## ABOUT THE COMPREHENSIVE CANCER CONTROL NATIONAL PARTNERSHIP

The Comprehensive Cancer Control (CCC) National Partnership is an influential group of organizations that use their strengths within the cancer community to change the course of the cancer burden in the U.S. Sixteen leading cancer organizations have joined together to facilitate and maintain CCC coalitions. These coalitions develop and sustain implementation of CCC plans at the state, tribe, territory, U.S. Pacific Island Jurisdiction, and local levels. CCC coalitions are change agents and have a strong affect on important cancer challenges facing the U.S. today.

If you would like more information, please visit the CCC National Partnership website at <http://cccnationalpartners.org/>.

## GUIDE OVERVIEW

Welcome to this health resource guide, which has been put together to give you an overview of the policy, systems, and environmental change approach for creating healthier communities. It's known as the PSE approach for short. Take a look at the topics below to find out what you'll learn about in this guide:

### Using a PSE Approach

#### Understanding PSE Change

- What is PSE change?
- What are the advantages of this approach?

#### Implementing a PSE Framework

- What are the key resources, activities, and outcomes of the PSE approach?
- What elements are necessary to implement the PSE model?
- How are communities incorporating PSE change into their health programs?

### Building Strategic Capacity

#### Organizing a PSE Task Force

- How do we organize a PSE task force?
- What are the roles and responsibilities of the task force?
- How do we build the capacity of our task force?

#### Developing a Policy Agenda

- What do we mean by policy change?
- What are the key steps in creating a policy agenda?

### Wielding Tactical Expertise

#### Reaching Out to Stakeholders

- Who has a stake in the issue?
- How do we strategically engage stakeholders?
- How do we manage opponents?

#### Creating Strategic Alliances and Facilitating Change

- What are some ways to bring about desired changes in community infrastructure or policy?
- What is direct action organizing?
- What is community engagement?

#### Sustaining Momentum

- How can PSE initiatives sustained?
- How can we keep our team engaged?

# Section I

---

## Understanding PSE Change

## INTRODUCTION

Let's start by giving you a little background information. In the past, public health interventions promoted changes to the behavior of individuals. The idea behind this was that if people know what is healthy, they will make healthier lifestyle choices. Critics of this approach think that focusing on lifestyle interventions puts too much emphasis on individual behavior without looking at the impact of social influences on health.

We've since learned that healthy living is about more than just personal choices, and that a variety of factors influence health behaviors.

For example, if a person chooses not to smoke, it doesn't automatically mean their health will be good; indoor environments must also be smoke-free to eliminate exposure to cigarette smoke. Clearly then, health is about more than "individual-level" factors.

With this in mind, a new socio-ecological model of population health proposes that "systems-level" factors affect individual and community health. What this means is that interpersonal dynamics as well as organizational, community, and public policies are very important in determining the behaviors of individuals and their exposures to risk (IOM, 2002).

The National Expert Panel on Community Health Promotion was convened by the Centers for Disease Control and Prevention (CDC) in 2007. Based on the findings of the 2003 IOM Report, the panel recommended a renewed emphasis on interventions that address the social, family, and community networks. This means living and working conditions, as well as broad social, economic, cultural, health, and environmental conditions (Liburd and Sniezek, 2007).

**This marked the beginning of the Policy, Systems, and Environmental (PSE) change approach.**

**According to the Institute of Medicine of the National Academies (IOM), "It is unreasonable to expect that people will change their behavior easily when so many forces in the social, cultural, and physical environment conspire against such change." (IOM, 2003)**

## WHAT IS PSE CHANGE?

Now that you know how the PSE change approach started, let's take a closer look at what it is. Your experience has probably already shown you how systematic intervention can produce long-term and sustainable improvements in population health. This can be achieved by new public policies, organizational practice changes, and improvements in the psycho-social and built environments. PSE change supports the improved health and well-being of individuals and families through a comprehensive and practical approach. This means that it's effective in organizations, schools, and health-care systems. What's more, PSE change can be used as a way to leverage community, legislative, and organizational action to bring about positive change in our physical environment.

**Successful PSE strategies are evidence-based, multi-sector community collaborations that create changes to make healthier lifestyle choices an easy and feasible option for every member of the community.**

To some extent, PSE change relies on changes to individual behavior. It also creates an environment that encourages specific individual behaviors to achieve healthy outcomes.

Let's look at some examples of what PSE change does. To start with, it can encourage individuals to select healthier foods and increase access to health screening. Within bike- and walk-friendly communities, it can also support access to physical activity.

Along with encouraging healthy choices, PSE change can discourage unhealthy ones by restricting public smoking and promoting low-sugar or unsweetened snacks in vending machines in schools and workplaces.

To achieve faster change and create healthier communities, an IOM committee (IOM, 2005) recommended that we:

- Empower communities and neighborhoods.
- Change the environment.
- Forge strategic partnerships.
- Educate stakeholders.
- Identify leaders and build on cultural assets.
- Collect and share local data.
- Evaluate programs and interventions.
- Transfer successful interventions to other communities.

**Engagement in these activities is crucial to the success of any PSE change program. Addressing the root causes of chronic diseases and related risk factors fosters sustainable change and reduces the burden of chronic disease.**

By adjusting an individual’s environment, PSE change can lead to modifications in their behavior that are permanent and beneficial.

Setting	Traditional Approach	PSE Approach
School	Teach a unit on healthy nutrition.	Provide fruits and vegetables on the lunch menu.
Workplace	Offer health screenings once a year.	Provide access to a gym on site, and offer free fitness classes for employees.
Community	Organize annual races or walks to raise awareness of diseases.	Increase the community’s access to green space and public transport; create walking and biking paths.

## WHAT ARE THE BENEFITS OF THIS APPROACH?

There are many advantages of a PSE approach to health interventions. Unlike behavioral change programs, which target individual change, a PSE approach has an impact on population health. It's a long-term approach that's designed to make a sustained improvement in community health.

A PSE approach that builds on the cultural and social assets of the community has a greater chance of success, and because of this, community engagement is essential. In turn, engagement empowers communities to take part in the process and advocate for their own health. It also fosters strategic public-private partnerships to improve the health of the community.

**Community engagement**, or community mobilization, is defined as working collaboratively with and through groups of people that are united in some way. It might be by geographic proximity, special interests, or similar situations to address issues that affect the well-being of that group of people.

During the last two decades, researchers have determined that community involvement affects not only the incidence of illness, but long-term health improvements as well. Systematic changes that occur at multiple levels in a community support more consistent long-term health improvements. The disease prevention and health promotion communities now use community engagement practices as a key tool for program planning (Association of Ontario Health Centres, 2006; Morgan & Lifshay, 2006).

Community engagement also helps to identify community leaders who can offer a hand in overcoming cultural and social barriers to successful PSE implementation. This is important in making it possible for communities to create or adapt successful interventions to meet their own needs. Public health interventions usually involve large-scale changes that address the needs and the preferences of large, and often diverse, groups of people. At the same time, political or media pressures and other factors can dilute how effective these actions are. This may lead to inefficient or ineffective programs, loss of valuable resources, and compromised health impacts. PSE is evidence-based, public health decision making. It combines scientifically supported interventions with what the community prefers to improve the health of the population. Community engagement in the assessment and decision-making phases is a major ingredient of this approach. The program planning framework is based on health behavior theory, and interventions come from peer-reviewed evidence. The success of any PSE approach hinges on evaluating and sharing these findings with the stakeholders for continued program improvement and support.

**Community engagement is a powerful partnership vehicle for facilitating behavioral changes.**

## Section II

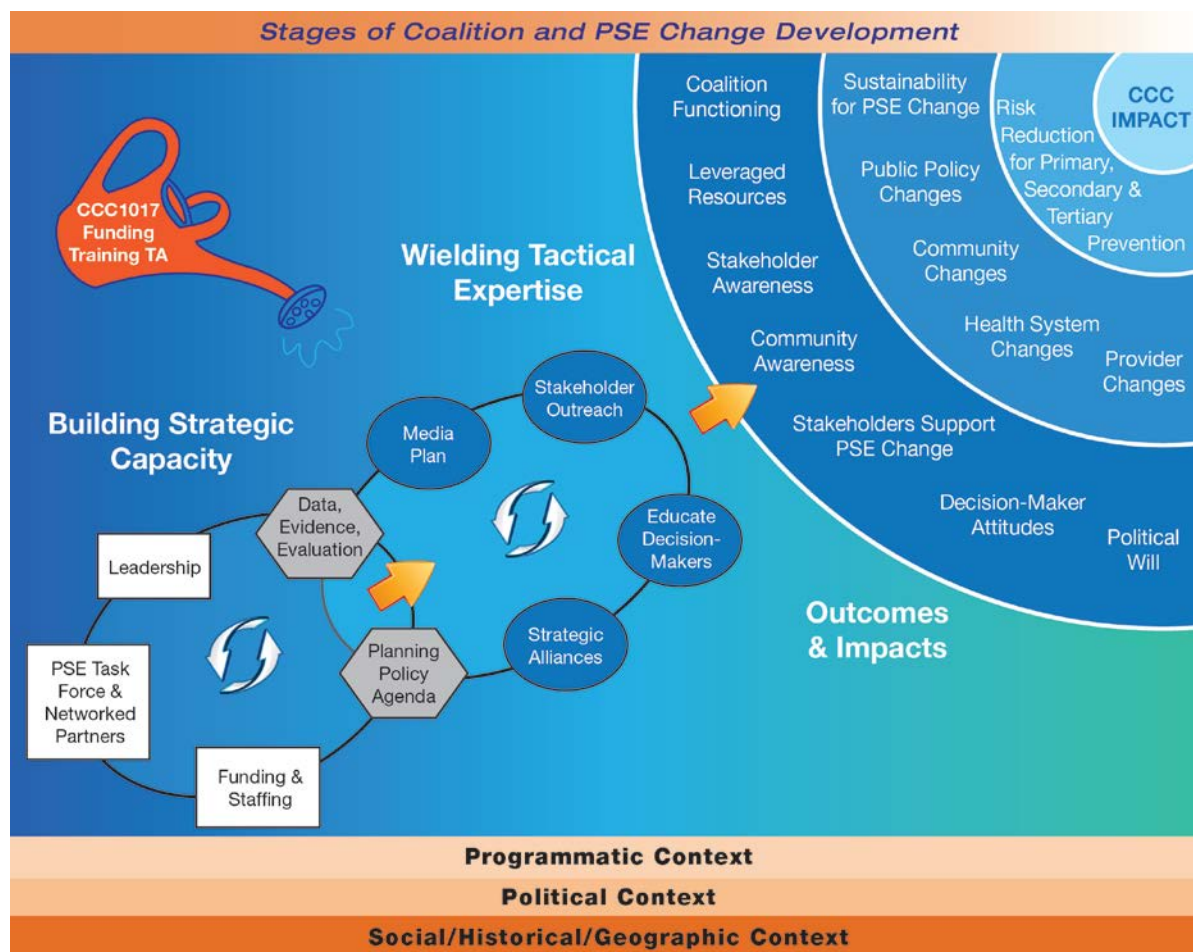

## Implementing a PSE Framework

## WHAT ARE THE KEY RESOURCES, ACTIVITIES, AND OUTCOMES OF THE PSE APPROACH?

Before you learn about the practical aspects of putting a PSE approach into action, let's briefly cover some theory. The diagram below shows a conceptual framework that was developed by the CDC after a thorough environmental scan. It covers PSE interventions to reduce the cancer burden. This theoretical and evidence-based model is based on one developed earlier by the CDC's Office of Smoking and Health (OSH) along with peer-reviewed literature on coalition and policy development.

**Figure 1.** Centers for Disease Control and Prevention

The model emphasizes the role of partnerships in Comprehensive Cancer Control programs to achieve PSE change strategies. These are based on cancer-plan goals, with a specific focus on cancers with the highest burden. The model also identifies key elements that operate within the political, social, historical, geographic, and programmatic context of national comprehensive cancer control programs.

These include:

- Resources to put chosen PSE activities into action. One example is funding to recruit and retain staff with expertise in PSE. Other examples of resources are technical assistance, guidance, and trainings provided by CDC and national partners.
- Capacity to develop infrastructure for PSE interventions.
- Capacity to carry out strategies for PSE change.
- Capacity to measure and evaluate PSE change-related outputs and outcomes.

The PSE model focuses on supporting and strengthening the program capacity through strategic alliances. Effective PSE coordination includes members from organizations that are in a strategic position to put cancer control activities into practice. Representation from diverse population subgroups, non-health organizations, and other chronic disease programs are built in as well. A PSE committee or task force can educate and inform key stakeholders about the impact of evidence-based policy, environmental approaches, and community-clinical linkages. They can also help to develop and implement an effective media plan. All of these activities are essential to the success of any PSE change program.

## WHAT IS NECESSARY TO IMPLEMENT THE PSE MODEL?

To implement the PSE model, you'll need to:

Build partners	Successful partnerships are critical to the success of any PSE change program.
Perform environmental scans	Programs may use environmental scans to identify priority health issues and related activities.
Address priority areas	Programs may assess and review options for addressing priority areas.
Assess feasibility of interventions	Programs may use feasibility studies to assess interventions, keeping in mind the political, programmatic, and social landscape.
Promote awareness	It is important to promote and support PSE approaches.
Engage community	Community engagement and community buy-in help to identify champions of program initiatives.
Communicate/educate	Media can be an effective way to communicate with stakeholders and educate them about issues related to policy.
Measure your success	Programs should have an established plan to measure the difference that PSE change has made in the community.

## How are communities incorporating PSE change into their health programs?

After recognizing the benefits of PSE change strategies, communities across the country are implementing a wide range of health-related policy changes. These include changes affecting physical activity, nutrition, tobacco use, and cancer screening. Let's look at some examples:

EXAMPLE ONE	<p>Several school districts are addressing the rising obesity crisis among their student population. To do this, many are improving the nutritional quality of their school lunches through the Farm to School program. This type of program directs nutrition services departments to increase the purchase of fresh and locally grown produce to use in school lunches (policy change). The nutrition services, local farmers, and health stakeholders then work together to incorporate this locally grown produce into school lunches (systems change). Access to healthy menu options helps students learn about healthy eating, and as a result, improves their eating habits (environmental change).</p>
EXAMPLE TWO	<p>As the agricultural capital of the world, the Fresno, California metropolitan area is home to numerous farmers markets, but this was not always the case. Until recently, the community had no access to local produce. A closer look revealed that Fresno's municipal zoning laws didn't allow for farmers markets in the city. Changing the zoning laws (policy change) meant that the community could develop farmers markets because the city provided mechanisms for their formation (system change). The creation of farmers markets increased access to healthy foods for the local community (environmental change).</p>
EXAMPLE THREE	<p>A PSE strategy doesn't have to start with a policy change. Community organizations can play a role in changing behaviors, conversations, and expectations about healthy living conditions. They can also build community support through partnerships, and advocate for policy change. PedNet, a community advocacy group in Columbia, Missouri, did just that. Through programs such as walk-to-school days, cycling education, walking school bus, and social marketing campaigns, they created an environment that gained the public's support for proposed walking and biking trails to schools. The result: Columbia has the strongest Safe Routes to School program in the country.</p>

## Organizing a PSE Task Force

## HOW IS A PSE TASK FORCE ORGANIZED?

A CCC coalition can assist in creating a new PSE task force or expanding an existing policy committee, and can help to combine existing policy efforts with PSE change strategies. An effective task force includes a core group of knowledgeable and committed people.

When recruiting a new task force or additional members for an existing policy committee, it's important that you find and recruit people who have skills and experience relevant to implementing a PSE change strategy. What's equally important is that new recruits should have an interest in putting PSE change strategy into action. Also consider recruiting task force members who currently work on related issues

or work with the target population (e.g., media, event planning, and policy development). It's important to inform all members of the amount of time they need to commit to serve on the task force.

Create working groups within the task force to focus on specific areas of the change strategy. The chairs of individual working groups need to report back to the task force to give updates on the progress of their group.

Ideally, each working group will have four or five members and will focus on a specific area, such as policy, communications, evaluation, or community engagement.

Working groups also allow the task force to recruit more members, build capacity in PSE implementation, and rotate members in different roles within the task force.

**Identify and recruit individuals who have skills and experience relevant to, as well as an interest in, implementing PSE change strategy.**

**This is critical to sustaining motivation and interest among members for the long-term sustainability of the task force.**

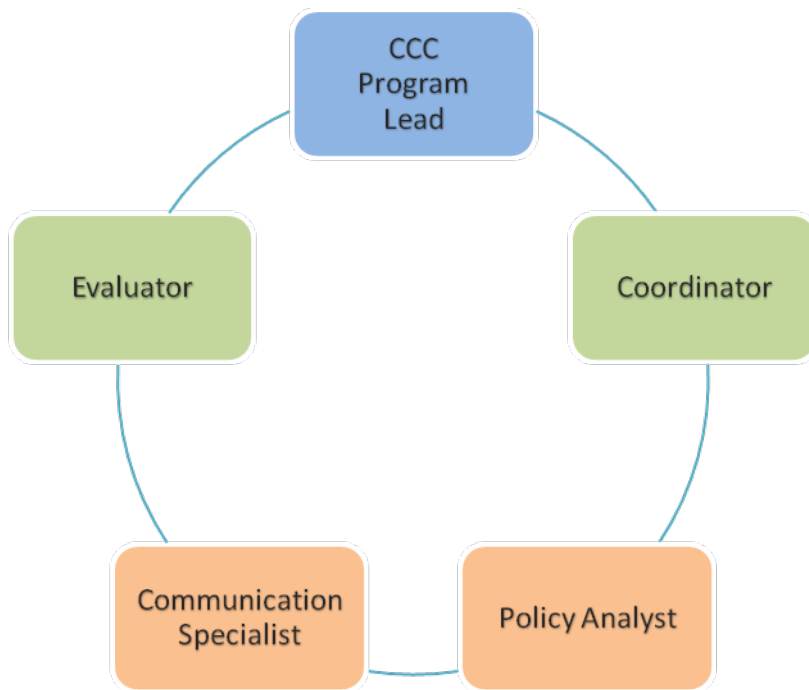

## Characteristics of a PSE Task Force

The task force will play a crucial role in all aspects of implementing the PSE activities. It's important to carefully consider the makeup and responsibilities of the task force. Characteristics of a successful task force that you should be aware of include:

<b>Strong leadership</b>	Establish strong leaders early in the development process to provide guidance and coordinate activities of the task force members.
<b>Diverse membership</b>	Recruit the right mix of people from the right organizations. They'll be invested in the policy issues being pursued and able to lend their expertise in policy, media, and evaluation so that the PSE strategy of the task force can be implemented.
<b>Clear objectives and expectations</b>	Early in the process, establish clear objectives and expectations to help avoid misunderstandings about roles and responsibilities.
<b>Committed membership</b>	Recruit individuals who are able and willing to join the task force. Most members are volunteers, so it's important to recognize their service and dedication.
<b>Positive environment</b>	Create a positive environment that fosters collaboration, promotes continuous improvement, and encourages input from the team. This is important for the long-term sustainability of the task force and its goals.
<b>Appropriate stakeholders</b>	Identify, recruit, and engage stakeholders whose policy agendas align with those of the coalition and task force. It's important to find common ground among all stakeholders to be able to accomplish both short- and long-term goals.
<b>Sustainable task force</b>	Develop a plan early on to sustain the task force and its priorities. Allow room for flexibility to be able to adapt to changing circumstances.
<b>Champions</b>	Identify champions who will promote and support the implementation of the policies pertaining to task force priorities.
<b>Adaptability</b>	Strategically adapt to political and environmental change.
<b>Diverse portfolio</b>	Create a diversified resource portfolio to deal with unforeseen changes and to provide opportunities to engage multiple stakeholders.
<b>Collaboration</b>	Enhance and strengthen relationships among coalition members and establish relationships with external partners with similar PSE goals.

## Composition of a PSE Task Force

The core of the ideal PSE task force will include a person from a Comprehensive Cancer Control (CCC) program. This person acts as a leader, a coordinator, a policy analyst, a communications specialist, and an evaluator. Once the primary task force is formed and has drafted its policy agenda, the task force can identify partners to help it carry out the policy agenda.

Next you'll identify and recruit key people from those organizations. Ideally, a task force will have a chair or co-chairs, community opinion leaders, key stakeholders, and policy makers. Each stakeholder group should appoint one to two members to the task force. Select your members based on their knowledge, skills, goals, and work styles. If you can get a mix of experienced members as well as younger, less experienced ones this will provide balance and makes sure different viewpoints aired. This is important to a high-functioning task force.

Having the right people at the table is vital to any successful PSE strategy and implementation plan.

**Members with diverse areas of expertise and different levels of experience will benefit the task force. Diversity, combined with a commitment to PSE change, is the foundation for a productive task force. Engage organizations that work directly with the community, as well as community leaders.**

## WHAT ARE THE ROLES AND RESPONSIBILITIES OF THE PSE TASK FORCE?

If you want to put together a successful task force, each member has to understand their own responsibilities and how they relate to the overall goals. The most effective task force leaders know their members' skills, expertise, and availability before assigning responsibilities. If you give people tasks that match their skills, it ensures they stay interested in the task force objectives. Members are most effective when given tangible assignments.

Successful leaders keep task force members informed of activities. Regular interaction and communication helps to maintain the momentum once activities are underway. The result is a more effective task force that uses team working to overcome any barriers that come up.

The best leaders ask for regular feedback from members about how the task force is working. Implementing the recommendations of members lets them know that they're valued within the team. Thank-you notes or public recognition at special events can also achieve this and will go a long way towards improving overall morale.

Members of CCC coalitions can help support implementation of PSE strategies, and provide subject matter expertise in policy, media, and evaluation related to the strategies.

**Task force members need to know they are headed in the right direction. To accomplish this, keep members informed of all task force activities at all times.**

To get the right people into the right positions, make sure your task force includes primary members that fulfill the following roles:

### **Comprehensive Cancer Control Program Director (or designee)**

This member knows and understands comprehensive cancer control, the state coalition's work, and the National CCC Program.

### **Community Organizer(s)**

This role requires someone with a thorough knowledge of community engagement who will be the messenger between the PSE task force and the community.

### **Communications Specialist**

The specialist keeps members and stakeholders up-to-date on group activities as well as creating and distributing media releases about the group's activities to print and broadcast outlets.

They also organize events to increase awareness or knowledge of PSE activities among stakeholders and the public. Besides this, they respond to incoming information requests from media outlets, control information output, and promote cooperative relationships between task force members, stakeholders, lawmakers, and the public.

### **Health Systems Administrator**

The health systems administrator helps the task force understand the workings of medical care organizations, health-care regulations, and emerging trends in health-care innovation and delivery.

### **Meeting Facilitator**

This person takes notes at meetings and has to be acceptable to all task force members. They have no decision-making authority, but help the group identify and solve problems as well as make decisions. The facilitator also contributes structure and process to interactions and enables the task force to function effectively and make high-quality decisions.

### **Policy Analyst**

This member can perform a policy scan and knows how to frame policy issues. They know how to develop a policy systems and environmental change agenda and build partnerships and consensus among a group of stakeholders.

### **Representative from the Comprehensive Cancer Control Coalition**

This member understands the goals, objectives and activities of the coalition. In addition, the CCC coalition member knows the importance of involving and collaborating with broad sectors of the community.

### **Representatives from state agencies and programs, community-based organizations, and other state or local coalitions**

Representatives may be individuals from faith-based and underserved communities who work on issues relevant to the task force's PSE implementation strategy. Issues could include tobacco control, nutrition and physical activity, and cancer survivorship.

---

## HOW IS TASK FORCE CAPACITY BUILT?

To build capacity, you can start with task group discussions about progress, new opportunities, partner strengths, and the resources needed. CCC National Partners with PSE expertise can offer extra help to the task force in assessing capacity building needs. Task force members might want to work with the National Partners to plan a technical assistance workshop to address gaps in resources and pinpoint new opportunities. This will also help to build a relationship with National Partner experts who can continue to provide guidance. Building relationships with PSE task force members from states that have implemented or plan to implement PSE strategies could be helpful as well.

**[CLICK HERE AND LEARN MORE ABOUT ORGANIZING A PSE TASK FORCE  
BY VIEWING A MINI-RECORDED WEBINAR](#)**

# Section IV

## Developing a Policy Agenda

## WHAT IS MEANT BY POLICY CHANGE?

Before a committee or task force develops a policy agenda, it needs to understand what policy change means in the context of policy, systems, and environmental change.

Generally, a policy is a **guideline or principle that reflects decisions by government or a nongovernmental organization.**

These written statements can be:

- Resolutions;
- Standards;
- Zoning laws;
- Contracts or agreements;
- State, federal or local laws;
- Local ordinances;
- Company policies;
- School policies, etc.

These policies significantly affect the people in the community or organization. Effective policies must be supported by appropriate enforcement mechanisms.

**Don't lose sight of the smaller policy changes that you can bring about.**

In the context of PSE change, a policy change is a plan that addresses local, regional, or state issues important to the Comprehensive Cancer Control (CCC) programs and its partners.

For example, a change in a school policy that increases the nutritional content of lunches served in the cafeteria will have a positive impact on the health of many students.

Bringing about statewide policy changes can be a longer-term activity, and putting these policies into action can take time. With this in mind, it is important to keep focused on policy changes that you can achieve in the short term and the combined impact of those small changes on the “ultimate” goal.

## WHAT ARE THE KEY STEPS IN CREATING A POLICY AGENDA?

Policy development includes identifying problems and bringing them to the attention of leaders. The next stage is framing the problems before formulating a policy. Together, these steps determine whether a problem or policy proposal is acted on.

Before a task force can implement a policy agenda, it must figure out which PSE issues to follow up. Besides this, it has to identify the issues that groups are already working on at the state or local level, who the partners are, and which issues have gained momentum. The task force also needs to identify initiatives that haven't been successful by checking what other states have done and learning from those experiences. By carrying out a community assessment, you can learn more about local and regional problems and sponsored initiatives. For example, shared use is an initiative of the American Heart Association. What this means is that many resources, including technical support, are already in place for PSE task forces to access.

A task force looks for solutions to the problems you've identified. In the initial steps of this process you need to:

### Conduct a Policy Scan

PSE change is evidence-based, and gathering and reviewing cancer surveillance data is an important first step. For example, knowledge of the state's cancer burden data is essential in helping to develop targeted cancer interventions. You can do this by working with state CCC leadership teams and local coalitions to identify communities that will be good places to gather local data. In turn, the data can be used to inform your PSE strategy and make a compelling case for your policy agenda.

## Understand and Define the Problem

First, conduct a statewide environmental PSE scan. This scan will give you a broad understanding of ongoing initiatives and proposed or implemented state or local policies. It's also helpful for you to find out about initiatives that haven't worked in the past and some of the barriers that have come up as well as contextual issues related to proposed PSE policies or approaches. Efforts undertaken in other states are also very informative.

## Know the Political Landscape

It is important to develop a policy agenda based on defined needs and capabilities, rather than on what is politically feasible at the time. A policy agenda that shifts with changes in the political climate can be confusing, so it's critical that you understand your political landscape. If you need help, contact the American Cancer Society Cancer Action Network and other National Partners. They can give information on current national and state policy issues before you start to develop your PSE change strategy. Recognize that even if the political landscape is not suitable for bringing about a big policy change, meaning legislation, you can still achieve powerful and effective systems and create environmental changes that support your PSE strategy.

## Identify the Issues

Stakeholders' interests may help identify important issues. Stakeholders may take different sides of an issue like the laws on tobacco control for example. Some stakeholders might want to control the use of tobacco products, while others look for policies that help smokers to access lower-risk products like e-cigarettes. In other cases, stakeholders may take the same position on an issue, but for different reasons.

## Frame the Issue – Systems Approaches

The way a problem is stated or an issue is framed influences the types of solutions put forward. Framing is how a problem is presented; it includes the use of particular messages and images that capture people's attention, helping them to understand an issue. Issue framing can help stakeholders convince policy makers to recognize the issue as a problem, include it on their agenda for debate, and determine appropriate policy responses. Issue framing often sets the terms for policy debate. "The eventual fate of a policy proposal is also a function of how it is formulated in the first place—how it defines the problems to be attacked and what it offers in the way of policy solutions." (Porter, 1995)

### Assess Readiness

Assess the timing and timeliness of activities. These are important considerations and can often be overlooked. Determine whether there are efforts that already have momentum. If so, are the issues well covered? Do you want to participate in these activities or work on other issues? Determine the coalition members who are ready to embrace the issue and are ready to partner to take action, and the potential impact on the population. Will activities impact populations with the greatest cancer burdens?

[\*\*CLICK HERE TO LEARN MORE ABOUT DEVELOPING A POLICY AGENDA  
BY VIEWING A MINI-RECORDED WEBINAR\*\*](#)

## Section V

---

## Reaching Out to Stakeholders

## WHO HAS A STAKE IN THIS ISSUE?

Engaging a diverse group of stakeholders can help broaden the debate about solutions and policy actions. Depending on the policy change being considered, potential stakeholders could include members of:

- External cancer organizations
- Organizations protecting children’s health
- State or local lawmakers
- Parents
- Media
- Cancer survivors and their families
- Research entities
- Contract lobbyists
- Neighborhood community groups/associations
- School districts
- Parent-teacher associations
- Local chambers of commerce
- CCC program staff
- PSE staff
- Key CCC partners

Before you invite potential stakeholders, prioritize their influence on key issues such as legislation, finance, community engagement, and others. Ask them to help identify relevant policy issues and ideas for getting those policies in place to support your PSE intervention.

## HOW ARE STAKEHOLDERS ENGAGED STRATEGICALLY?

Determine how best to engage your stakeholders, keeping in mind your resources. Engaging with them based on their power and influence may be the best use of time and human resources. Identify a small group of key internal and external stakeholders. Look for individuals who:

- Care about finding the best solution
- Can do what you can’t—educate, advocate, and lobby
- Have close relationships with key decision makers
- Have expertise on the evidence needed to support the solution you’re looking for
- Have valuable relationships with the media
- Have expertise on opposing arguments

There are a lot of ways to analyze stakeholder involvement. In this guide, we’ll focus on two approaches. The first compares stakeholder power and influence versus their interests. When using this approach, it is important to include people who support the issues as well as those who don’t. The second approach compares the attractiveness of a policy, plan, or proposal against the capacity of the stakeholders to put the effort in. This approach is used to analyze potential partner organizations—those who are essentially aligned with the issues. Let’s take a look at the two options for stakeholder analysis next.

## Stakeholder Power versus Stakeholder Interest

### High Power - High Interest

- Assess key allies or opponents.
- Engage and consult allies regularly.
- Closely monitor and manage opponents.

### High Power - Low Interest

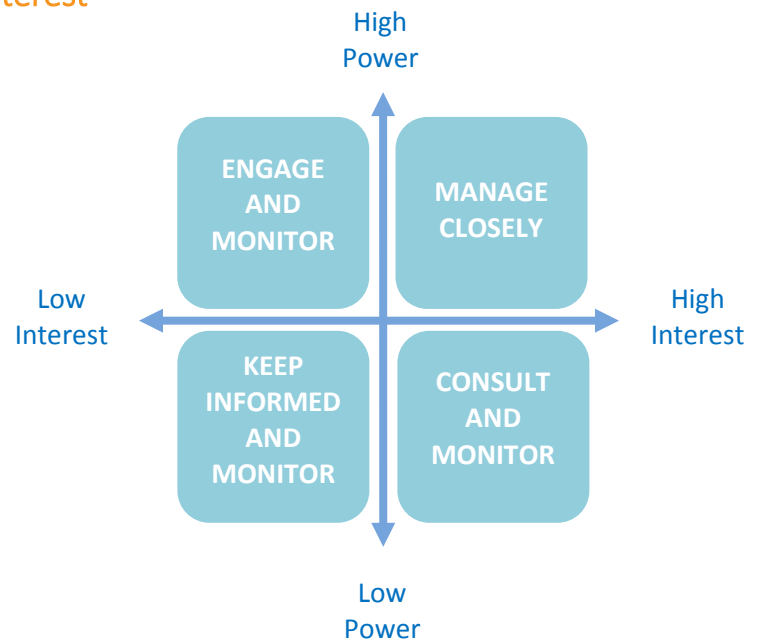

- Assess allies and opponents.
- Consider strategies to further engage allies.
- Monitor opponents.

### Low Power - High Interest

- Assess allies and opponents.
- Consult allies around interest areas.

### Low Power - Low Interest

- Consider keeping allies informed.

Adapted from Eden and Ackerman, 1988

## Stakeholder Capability versus Attractiveness of a Policy, Plan, or Proposal

### High Attractiveness - High Capacity

- Pursue these worthwhile policies, plans, or proposals.

### High Attractiveness - Low Capacity

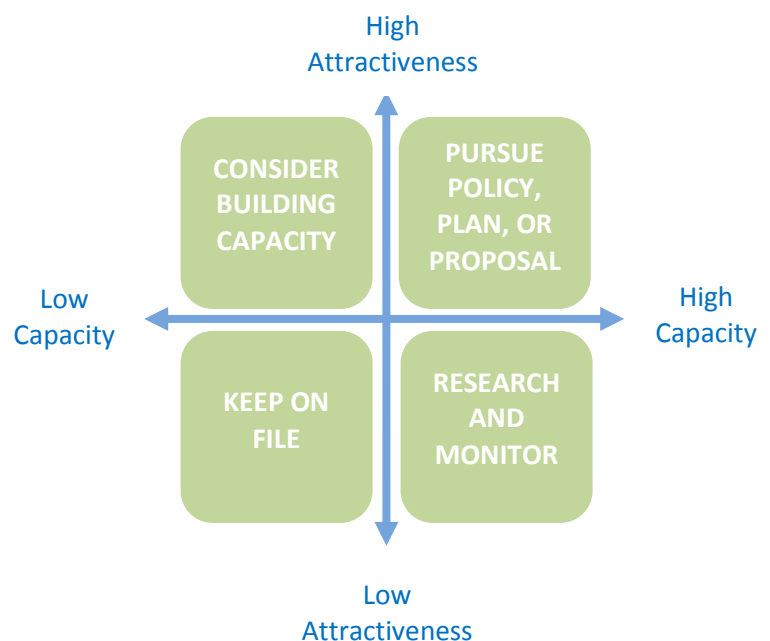

- Consider time and resources needed for capacity building.

### Low Attractiveness - High Capacity

- Assess why attractiveness is low.
- Consider reframing the issue.
- Consider other ways to engage stakeholders.

### Low Attractiveness - Low Capacity

- Consider keeping these on file.

Adapted from Bryson, Freeman and Roering, 1986

## HOW ARE OPPONENTS MANAGED?

In community work, expect opposition and be prepared for it. Even if everyone agrees on the goals, they may have different opinions on how to achieve them. Familiarity with your opposition and their strategies will help identify the best ways for your team to respond to them.

### What are some useful tactics?

Some general tactics to deal with opposition are:<sup>1</sup>

- **Understand your opposition's strategy.** Knowing your opposition's beliefs, background, and position will put you in a stronger position to respond to and deal with them. An opposition you understand will be easier to deal with than one you don't. Your knowledge of the opposition is your power.
- **Turn negatives into positives.** Making a bad situation work for you can put you in a very powerful position. As the saying goes, "When you get lemons, make lemonade."
- **Set the agenda.** Make sure you establish or influence the agenda, which in turn will give you an opportunity to express your views. Don't let the opposition be the only ones to talk about their strengths.
- **Publicly state your opposition's agenda.** Not only will it make your team aware of the opposition's agenda, but you may also win the sympathy and respect of your stakeholders. This is especially true if your opponent is more influential than you are.

Your knowledge of the opposition is your power.

<sup>1</sup> This list adapted from Community Tool Box: Section 2. How to Respond to Opposition Tactics.  
<http://ctb.ku.edu/en/table-of-contents/advocacy/respond-to-counterattacks/respond-to-opposition/main>

### What are some useful tactics?

- **Be careful about how you present your opposition to the public.** Some information that you might want to consider making public includes:
  - What your opponent has said or done
  - Why it's untrue and/or unfair
  - What's true and/or fair
  - How the truth affects you and your opponent
- **Ask for a third-party facilitator.** Facilitators make it easy for opposing parties to reach their goals by refocusing their thinking in terms of interests rather than positions. Facilitators also provide process leadership and expertise to resolve differences and conflicts. In a nutshell, a facilitator can help you reach a compromise in less time.
- **Learn from the past.** If an organization or individual has a history of responding in a certain way, it's likely that they'll respond the same way in the future. Knowing the history and preferred tactics can help you anticipate and prepare for any likely turn of events.
- **Be willing to compromise.** Agree to disagree. Compromise is a common solution to resolving disagreements in negotiation and mediation processes. Using compromise to settle a conflict or dispute requires the parties to be aware that the outcome might be less than they had originally hoped for. Yet, if the focus is on what's achieved, rather than on what's given up, it's more likely that the parties will accept and leave feeling satisfied.

## Section VI

---

## Creating Strategic Alliances and Facilitating PSE Change

## WHAT ARE SOME WAYS TO BRING ABOUT DESIRED CHANGES IN COMMUNITY INFRASTRUCTURE OR POLICY?

Let's look now at some of the ways that the PSE Task Force can have an impact on the infrastructure and policies in their community. These are:

- **Direct Service:** Individuals can perform direct service to the community on their own time or in the work they do.
- **Education:** The task force can build community awareness of a policy or program through outreach or other education efforts. Education includes research, analysis, and spreading information. For example, the task force could: a) educate the community about an available cancer screening program, or b) analyze the performance of a particular cancer screening program and share that information with a policy maker in the community.
- **Self-Help:** The task force can encourage and empower community members to take advantage of existing programs, such as cancer screening programs.
- **Advocacy:** Through advocacy, individuals and organizations can propose policy change and influence policy makers.
- **Direct Action:** The task force can use a combination of stakeholder engagement and advocacy in relation to specific policies.

## WHAT IS DIRECT ACTION ORGANIZING?

Creating basic changes in infrastructure, systems and policies empowers members of the community by allowing them to take the initiative in improving their quality of life.

Direct action organizing is a process for engaging with policy makers to benefit the community.

Creating basic changes in infrastructure, systems, and policies empowers members of the community by allowing them to take the initiative in improving their quality of life. It establishes and strengthens direct lines of communication between policy makers and their communities, informing decision makers of the needs of the community.

It also establishes community members as a tremendous resource for those who create policy to benefit the community.

After working with many organizations involved in direct action work, campaigns, and policy change efforts, the Chicago-based Midwest Academy has developed a useful direct action organizing strategy chart for organizing and implementing a policy campaign.

This tool gives stakeholders a road map to develop a strategy for planning and organizing their PSE change efforts. It helps the task force to map out exactly what they want and what they are going to do. What's more, it allows them to do it in a way that lets them to build power and influence.

The strategy chart that follows on the next page is best completed over a period of time or over a series of meetings. For example, a task force might start with the goals and some of the organizational and coalition considerations. Then they might revisit them later and discuss constituents, allies, opponents and targets. It's important to take time and put in some thought when completing the strategy chart.

It's very important to involve key partners—the people who are knowledgeable not only about the issue, but also about the community and the target population. It's always good to engage more people in the process; perhaps not everyone would be intimately involved in the development of the strategy chart, but they could be a great benefit during its review and approval.

## MIDWEST ACADEMY STRATEGY CHART Organizing and Implementing a Policy Campaign

*After choosing your issue, fill in this chart as a guide to developing strategy. Be specific. List all the possibilities.*

GOALS	ORGANIZATIONAL CONSIDERATIONS	CONSTITUENTS, ALLIES & OPPONENTS	TARGETS	TACTICS
<p><b>1</b> List the long-term objectives of your campaign.</p> <p><b>2</b> State the intermediate goals for this issue campaign. What constitutes victory? How will the campaign:</p> <ul style="list-style-type: none"> <li>• Win concrete improvements in people’s lives?</li> <li>• Give people a sense of their own power?</li> <li>• Alter the relations of power?</li> </ul> <p><b>3</b> What short-term or partial victories can you win as steps toward your long-term goal?</p>	<p><b>1</b> List the resources that your organization brings to the campaign. Include money, number of staff, facilities, reputation, canvass, etc.</p> <p>What is the budget, including in-kind contributions, for this campaign?</p> <p><b>2</b> List the specific ways in which you want your organization to be strengthened by this campaign. Fill in numbers for each:</p> <ul style="list-style-type: none"> <li>• Expand leadership group</li> <li>• Increase experience of existing leadership</li> <li>• Build membership base</li> <li>• Expand into new constituencies</li> <li>• Raise more money</li> </ul> <p><b>3</b> List internal problems that have to be considered if the campaign is to succeed.</p>	<p><b>1</b> Who cares about this issue enough to join in or help the organization?</p> <ul style="list-style-type: none"> <li>• Whose problem is it?</li> <li>• What do they gain if they win?</li> <li>• What risks are they taking?</li> <li>• What power do they have over the target?</li> <li>• Into what groups are they organized?</li> </ul> <p><b>2</b> Who are your opponents?</p> <ul style="list-style-type: none"> <li>• What will your victory cost them?</li> <li>• What will they do/spend to oppose you?</li> <li>• How strong are they?</li> <li>• How are they organized?</li> </ul>	<p><b>1</b> Primary Targets A target is always a person; it is never an institution or elected body.</p> <ul style="list-style-type: none"> <li>• Who has the power to give you what you want?</li> <li>• What power do you have over them?</li> </ul> <p><b>2</b> Secondary Targets</p> <ul style="list-style-type: none"> <li>• Who has power over the people with the power to give you what you want?</li> <li>• What power do you have over them?</li> </ul>	<p><b>1</b> For each target, list the tactics that each constituent group can best use to make its power felt.</p> <p>Tactics must be:</p> <ul style="list-style-type: none"> <li>• In context</li> <li>• Flexible and creative</li> <li>• Directed at a specific target</li> <li>• Understandable to the membership</li> <li>• Backed up by a specific form of power</li> </ul> <p>Tactics include:</p> <ul style="list-style-type: none"> <li>• Media events</li> <li>• Actions for information and demands</li> <li>• Public hearings</li> <li>• Strikes</li> <li>• Voter registration and voter education</li> <li>• Lawsuits</li> <li>• Accountability sessions</li> <li>• Elections</li> <li>• Negotiations</li> </ul>

© Midwest Academy  
28 E. Jackson Blvd. #605, Chicago, IL 60604

### What's important to think about when identifying goals?

The first task for the group is to determine their goals. Coming up with realistic goals and a realistic timeline for achieving them is vital for the success of the campaign.

Begin by establishing short-term, mid-term, and long-term goals. At the start of a campaign it is important to set achievable, short-term goals. Achieving short-term goals produces early “wins” that give the motivation and enthusiasm needed to keep people committed and drive long-term projects forward. Don't forget to also identify long-term goals; they represent the sustained improvement to health and quality of life that lies at the heart of the task force's efforts.

### What's meant by organizational considerations?

This step involves matching available resources to the needs of the task force. Consider short-term and mid-term goals and the desired outcomes. Do you want to have a bigger task force? Do you want to engage individuals or organizations that are key influencers of your targets? Maybe identifying some new partners is important. Increasing community involvement and support for a given issue may be an important goal for your task force, and you might want to find some new allies to support the effort.

Organizational considerations can help identify task force resources such as people, money, and information. At this stage, the task force can determine exactly what's needed, establish a path to meet those needs, and discuss potential barriers.

### What's important to keep in mind about allies and opponents?

The people who will be affected by policy change or a campaign issue may support you, but they may be unaware of your efforts. Champions are not clearly highlighted on the chart, but they are an important consideration. These are the people who have power and are key influencers with decision makers. It's important to identify these people and continue to engage them. They'll carry the torch for the task force and be vocal and dedicated advocates on that particular issue.

Consider who might be opposed to the campaign. These are the people who will counter your campaign efforts every step of the way. It is important to remember that as hard the task force is working to get a particular policy changed or implemented, the opposition is working just as hard to prevent that from happening. Consider the power and resources they have at every step of the process.

An environmental scan can be used to identify potential allies and opponents.

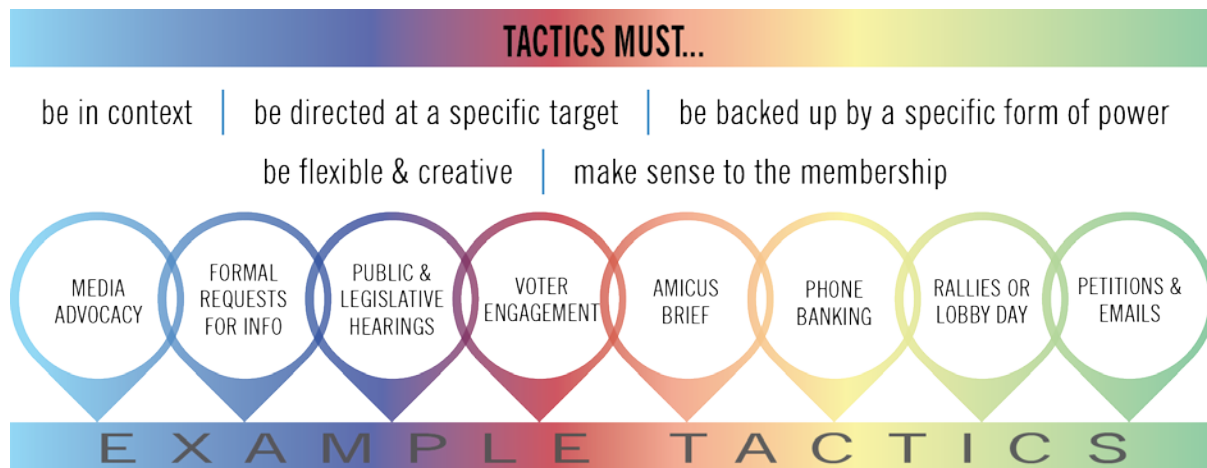

### What's important to know about primary targets?

You should remember that targets are always individuals, not institutions. The task force can use specific tactics to engage targeted individuals, which will affect the entire organization if successful.

Targets are the people who can make decisions and vote yes or no. Consider who at the task force table may have a relationship with these key individuals. Also consider secondary targets—perhaps a staff person or a family member. You can engage a number of people (secondary targets) to influence that primary target.

### What are some examples of tactics used in a successful campaign?

It is important that you understand the difference between a strategy and a tactic. A tactic is an action you will take; a strategy is a blueprint for what will have to be done over the course of the entire campaign.

Be flexible and creative when thinking about tactics. In some instances, a rally or a demonstration could be enough to influence a decision maker. Often one-on-one meetings are needed. Other tactics are working with media outlets to carry a story, writing letters to the editor, conducting press conferences, spearheading a petition drive, phone banking, opinion polling, asking for a formal meeting, or making a request under the Freedom of Information Act.

When thinking about tactics, consider the specific target. Don't do something merely for the sake of doing it. Consider whether the tactics make sense to the members of the task force and whether they have the buy-in of task force members. One member of the task force may want to engage in specific tactics, while others may not. If this is the case, one organization can engage in the activity under that organization's name, but not in the name of the task force. It is important to distinguish clearly between activities that reflect the task force's priorities and related activities undertaken by an individual member organization.

### Some other things to consider

You'll have to think about the financial resources needed to carry out the campaign. Your budget might include funds and in-kind contributions and support. Identify task force partners and others who are able to provide this support. Also consider who's going to be responsible for putting your tactical plan into practice and set a timetable for achieving these steps.

Once the draft strategy chart is completed, it's important to engage the leadership and key members within the CCC coalition. Present the information and ask for their feedback and support. Have an in-depth discussion about the chart's organization to make sure that it reflects the concerns of the coalition members.

Revisit the strategy chart frequently to modify it, and make adjustments as necessary. Strategy charts are dynamic, active documents that reflect the changing strategic landscape. A number of things could change along the way, and the strategy chart should be updated to reflect that.

## WHAT IS COMMUNITY ENGAGEMENT?

As you've learned already, whatever strategic approaches the task force chooses, community engagement is an essential part of it. Engagement is going to help create long-term change and make healthy options available, accessible, and convenient for all residents.

The CDC Agency for Toxic Substances and Disease Registry Committee for Community Engagement has defined community engagement as: The process of working together with and through groups of people connected by geographic proximity, special interest, or similar situations to address issues affecting the well-being of those people. These partnerships help mobilize resources, influence leaders, and serve as catalysts for changing policies, programs, and practices. They are "a powerful vehicle for bringing about environmental and behavioral changes that will improve the health of the community and its members" (Centers for Disease Control and Prevention Public Health Practice Program Office, 1997).

**Community engagement is a powerful vehicle for bringing about environmental and behavioral changes that will improve the health of the community and its members.**

### Keep these points in mind when working with the community:

- Make the purpose clear
- Know the community
- Build relationships within the community
- Accept self-determination of the community
- Foster partnerships within the community
- Recognize and respect community diversity
- Identify and mobilize community assets
- Engage organizational and individual change agents
- Strengthen long-term commitment of partners

(Centers for Disease Control and Prevention Public Health Practice Program Office, 1997)

### Before starting a community engagement effort you should:

<b>STRATEGY</b>	Be clear about the purposes or goals of the engagement effort and the populations and communities you want to engage. Although you should certainly do so, communicating why community participation is necessary for PSE implementation won't always be enough to guarantee involvement. If this is the case, it's important to understand the barriers to engagement and have plans to overcome them. Make sure you have the resources and expertise to engage effectively with the community.
<b>RESEARCH</b>	Learn as much as possible about the community before reaching out to them. Familiarize yourself with the community's economic conditions, political structures, norms and values, demographic trends, history, and experience with engagement efforts. Learn about the community's perceptions of those setting up engagement activities. This will help you to map community assets, develop a picture of how business is done, and identify the individuals and groups whose support you need. The information may also provide clues about who must be approached and involved in the initial stages of engagement. Determine how your efforts to engage or mobilize the community around new issues may affect any preexisting efforts.
<b>PLAN</b>	Design and put into action engagement activities that address community diversity. This is important to the success of any PSE implementation strategy.

### For engagement to happen, it's necessary that you:

- Go into the community, make relationships with formal and informal leaders, build trust, and look for commitment from community organizations and leaders to create processes for mobilizing the community.
- Maintain the utmost ethical conduct when engaging with communities. Once trust is lost, it's very difficult to overcome and may obstruct future engagement. If engagement in a PSE effort has any risks, the community must be informed of them so that they can make informed decisions regarding their involvement

- Use County Health Rankings & Roadmaps as a call to action to engage the community. The report is a compilation of health outcomes and health factors that reflects the overall health of every county in every state in the country. Engagement will occur if people in the community identify with the issues being addressed, consider them important, and feel they have influence and can make contributions. The report can be used to:
  - Engage the community in conversations about health needs.
  - Raise awareness in the community about the various factors that influence health.
  - Act as a pointer to suggest areas where more in-depth analysis might be helpful.
  - Come up with a more detailed community health assessment (when combined with additional data).
  - Inform policy makers about the many factors that affect a community's health.
  - Help set up strategic planning efforts where none previously existed.
  - Promote and revitalize existing community health improvement efforts.
  - Provide justification in securing grant funding to conduct community health improvement efforts.
  - Help to address health disparities.
  - Provide validation to the community of needed policy, systems, and environmental changes.
  - Facilitate celebrating a community's successes.

(South Dakota Department of Health, 2012)

Participation will also be easier if people encounter few barriers to participation, find that the benefits of participating outweigh the costs (e.g., time, energy, and dollars), and believe the participation process and related organizational climate are open and supportive. Building trust and engagement requires long-term commitment, so it is important to be patient (Centers for Disease Control and Prevention Public Health Practice Program Office, 1997).

**Build trust and seek commitment from community organizations and leaders to create processes for mobilizing the community.**

## Section VII

---

## Sustaining Momentum

---

## HOW CAN PSE INITIATIVES BE SUSTAINED?

The PSE task force needs to decide how long the initiatives you've implemented will be kept going. The decision will vary from initiative to initiative. Some questions you can ask to help make this decision are:

- How long will it take the task force to achieve its goals? Will it take a year? Twenty years?
- Will the task force have an ongoing mission, or end after a specific goal is achieved?
- Is there sufficient community support to maintain the task force's initiative?

If you determine that the task force is a long-term organization, develop a sustainability plan. A sustainability plan can help your group get support from stakeholders, define policy strategies, and create a plan to make the best use of resources and organize information, including activities, evaluation findings, and budgets.

Your efforts to engage partners and promote needed policy strategies will help ensure sustainability. The process of creating a sustainability plan requires task force members to define their work and their level of commitment. Developing and implementing a sustainability plan takes significant time and resources, but it is worthwhile to do the planning at the outset rather than creating it at the end.

Right from the start, ask your team to decide on answers to these questions:<sup>2</sup>

- What aspects of the PSE effort need to be sustained to achieve long-term community health?
- Are the goals subject to change?
- What resources are needed to support the sustainability of the effort?
- What are the sources of funding, now and in the future?
- What are the potential obstacles to sustainability?
- What community support is there for the effort?

Some core elements of successful sustainability planning include:<sup>3</sup>

- Buy-in and support from key decision makers and community members
- Sufficient leadership, funding, and channels of communication
- Procedures to monitor policy implementation through enforcement and compliance
- Flexibility to input quality improvement measures as needed

## HOW IS TEAM ENGAGEMENT MAINTAINED?

What motivates individuals to support your efforts? Everyone is motivated in different ways, and it's usually presumed that money is a key motivator. But research shows that this is not the case. Many people would list respect, a sense of accomplishment, and recognition as the most motivational factors. With these in mind, here are some ways to keep your team engaged:<sup>4</sup>

### Involve your team members in the decision-making process

They often have great ideas that can make a significant difference. When they are involved, they resist less and buy-in faster. The end result is that changes can be implemented more quickly and easily.

### Communicate

Keep everyone informed. Team members want regular updates on the progress of the organization and their personal performance. Conduct regular face-to-face meetings, email, and conference calls to keep your team up to date.

### Celebrate individual and task force performance

This can include giving individual people awards or highlighting achievements in regular newsletters or other stakeholder correspondence. Small gestures such as token gifts to each team member can also promote good team morale.

### Set challenging goals

Set smart, measurable, achievable, realistic, and time-bound—SMART—goals, and give your team the opportunity to perform. People hold themselves to high standards and like to achieve what is expected of them.

**Communication is one of the key strategies in keeping your team members engaged.**

<sup>4</sup> List adapted from SUSTAIN Factsheets. How to Keep a Team Motivated.  
<http://solihull-sustain.org.uk/uploads/How-to-motivate-a-team.pdf>

### Give people the tools to succeed

Motivation quickly goes down if team members lack the tools they need to complete required tasks. Listen to your team members about what they believe is needed to carry out their role. After this, give them reasonable and effective tools so that they can succeed.

### Provide regular feedback

Feedback is important so that task force members know what they are doing well and what to change if there are issues. Although some leaders are reluctant to provide feedback, it is necessary for the team to thrive. Ignoring issues can lead to a decline in morale and may interfere with the task force's overall goals. Create a system through which leaders can regularly provide feedback to all team members. This will make sure that everyone's on the right track. Team members will respond accordingly and actually be more comfortable because they always know where they stand.

**A motivated and enthusiastic leader usually leads a motivated and enthusiastic team.**

### Lead by example

As a leader, you set the tone for task force members to treat each other with respect and dignity. A motivated and enthusiastic leader usually leads a motivated and enthusiastic team.

**As a leader, expect your team to look to you for direction and guidance.**

## WORKSHEETS

### Elements Necessary to Implement the PSE Model

<p><b>Build partners</b> Which partners are critical to a success?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Perform environmental scans</b> Do we need to conduct an environmental scan to identify priority health issues and related activities, or does this information exist?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Address priority areas</b> Based on our research, what are the priority areas to address?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Assess feasibility of interventions</b> What feasibility studies will help us assess interventions in terms of the political, programmatic, and social landscape?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Promote awareness</b> What resources do we have to promote and support PSE approaches?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>

### Elements Necessary to Implement the PSE Model

<p><b>Engage community</b> How will we engage the community to help us identify champions of program initiatives?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Communicate/educate</b> How will we use earned media to communicate with stakeholders and educate them about issues related to policy?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Measure your success</b> What resources do we have to measure and evaluate the difference that PSE change has made in the community?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/> <hr/> <hr/>

FOR MORE INFORMATION ON COMPLETING THIS WORKSHEET, REFER TO PAGE 13 OF THIS GUIDE.

### PSE Task Force

<p><b>Strong leadership</b> Who can help provide guidance and coordinate activities of the task force members?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Diverse membership</b> Who is invested in the policy issues being pursued? Who can lend their expertise in policy, media, and evaluation?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Clear objectives and expectations</b> What are the main roles and responsibilities of task force members?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Committed membership</b> Who is able and willing to join the task force? How will we recognize their service and dedication?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Positive environment</b> How will we create a positive environment that fosters collaboration, promotes continuous improvement, and encourages input from the team?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Appropriate stakeholders</b> Whose policy agendas align with those of the task force?</p>	<hr/> <hr/> <hr/> <hr/> <hr/> <hr/>

### PSE Task Force

<p><b>Sustainable task force</b> What resources are needed to sustain the task force and its priorities?</p>	<hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Champions</b> Who will promote and support the implementation of the policies pertaining to task force priorities?</p>	<hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Adaptability</b> What resources are available to help us be aware of political and environmental changes?</p>	<hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Diverse portfolio</b> Who might help us deal with unforeseen changes? Who else might help us with important resources?</p>	<hr/> <hr/> <hr/> <hr/> <hr/>
<p><b>Collaboration</b> Do we have strong relationships with the state and national cancer coalitions? How can we complement what they are doing?</p>	<hr/> <hr/> <hr/> <hr/> <hr/>

FOR MORE INFORMATION ON COMPLETING THIS WORKSHEET, REFER TO PAGE 17 OF THIS GUIDE.

**Policy Agenda Steps** - *What are the key next steps? Who will complete them and by when?*

 <p>CONDUCT A POLICY SCAN</p>	<hr/> <hr/> <hr/>
 <p>UNDERSTAND &amp; DEFINE THE PROBLEM</p>	<hr/> <hr/> <hr/>
 <p>KNOW THE POLITICAL LANDSCAPE</p>	<hr/> <hr/> <hr/>
 <p>IDENTIFY THE ISSUES</p>	<hr/> <hr/> <hr/>
 <p>FRAME THE ISSUES</p>	<hr/> <hr/> <hr/>
 <p>ASSESS READINESS</p>	<hr/> <hr/> <hr/>

**FOR MORE INFORMATION ON COMPLETING THIS WORKSHEET, REFER TO PAGE 24 OF THIS GUIDE.**

### Stakeholder Power vs. Stakeholder Interest

High Power/High Interest STAKEHOLDERS TO MANAGE CLOSELY

High Power/Low Interest STAKEHOLDERS TO ENGAGE & MONITOR

Low Power/High Interest STAKEHOLDERS TO CONSULT & MONITOR

Low Power/Low Interest STAKEHOLDERS TO KEEP INFORMED & MONITOR

### Stakeholder Capability vs. Attractiveness of a Policy, Plan, or Proposal

High Attractiveness/High Capacity POLICY, PLAN OR PROPOSAL TO PURSUE

High Attractiveness/Low Capacity CONSIDER BUILDING STAKEHOLDER CAPACITY

Low Attractiveness/High Capacity POLICY, PLAN OR PROPOSAL TO RESEARCH & MONITOR

Low Attractiveness/Low Capacity POLICY, PLAN OR PROPOSAL TO KEEP ON FILE

FOR MORE INFORMATION ON COMPLETING THIS WORKSHEET, REFER TO PAGE 29 OF THIS GUIDE.

## Organizing and Implementing a Policy Campaign

### GOALS

1 List the long-term objectives of your campaign.

---

---

2 State the intermediate goals for this issue campaign. How will the campaign:

- Win concrete improvements in people’s lives?
- Give people a sense of their own power?
- Alter the relations of power?

---

---

---

---

3 What short-term or partial victories can you win as steps toward your long-term goal?

---

---

### ORGANIZATIONAL CONSIDERATIONS

1 List the resources that your organization brings to the campaign. Include money, number of staff, facilities, reputation, canvass, etc. What is the budget, including in-kind contributions, for this campaign?

---

---

---

---

2 List the specific ways in which you want your organization to be strengthened by this campaign.

Fill in numbers for each:

- Expand leadership group
- Increase experience of existing leadership
- Build membership base
- Expand into new constituencies
- Raise more money

---

---

---

---

---

---

3 List internal problems that have to be considered if the campaign is to succeed.

---

---

## Organizing and Implementing a Policy Campaign

### CONSTITUENTS, ALLIES & OPPONENTS

- 1 Who cares about this issue enough to join in or help the organization?
- Whose problem is it?
  - What do they gain if they win?
  - What risks are they taking?
  - What power do they have over the target?
  - Into what groups are they organized?

---

---

---

---

---

---

---

---

- 2 Who are your opponents?
- What will your victory cost them?
  - What will they do/spend to oppose you?
  - How strong are they?
  - How are they organized?

---

---

---

---

---

---

---

---

### TARGETS

- 1 Primary Targets
- A target is always a person; it is never an institution or elected body.
- Who has the power to give you what you want?
  - What power do you have over them?

---

---

---

---

---

---

---

---

- 2 Secondary Targets
- Who has power over the people with the power to give you what you want?
  - What power do you have over them?

---

---

---

---

---

---

---

---

---
