# 2014 National Winter Canola Variety Trial

## Objectives

The objectives of the National Winter Canola Variety Trial (NWCVT) are to evaluate the performance of released and experimental varieties, determine where these varieties are best adapted, and increase the visibility of winter canola across the United States. Breeders, marketers, and producers use data collected from the trials to make informed variety selections. The NWCVT is planted at locations in the Great Plains, Midwest, northern U.S., and Southeast.

## Procedures

Seed for the NWCVT was distributed to 41 cooperators in 21 states for the 2013–2014 growing season. The locations receiving seed are illustrated on the map on the front cover. Of the 57 entries tested, 25 were commercial and 32 were experimental. These entries were provided by 12 global seed suppliers. All entries in the trial were treated with either Helix XTra, Prosper FX, or Accelaron seed treatments to control insects and seedling diseases through the late fall and early winter months.

Management guidelines were provided to cooperators, but previous growing experience influenced final management decisions. All trials were planted in small research plots (approximately 100 ft<sup>2</sup>) with three or four replications. Cultural practices, site descriptions, growing conditions, and performance data are provided for each harvested location. Yield results for some locations include 3-year summaries. Results are listed alphabetically by seed supplier.

The Brassica Breeding and Research Program at the University of Idaho performed total oil and protein analysis for all sites using near-infrared spectroscopy.

University of California-Davis, Southeast Missouri State University, Lincoln University, University of Nebraska-Lincoln, North Carolina State University Mountain Horticultural Crops Research and Extension Center, and North Carolina State University Williamsdale Biofuels Field Laboratory were

new cooperators in 2013–2014. See the back cover for a listing of participating cooperators.

The NWCVT continues in the 2014–2015 growing season and includes 54 entries. Eleven seed suppliers contributed to the trial, and it was distributed to 51 locations in 19 states.

## 2013–2014 Growing Conditions

Temperature and precipitation data are shown at the top of the page for each location. Thick black lines on the temperature graphs represent long-term average high and low temperatures (°F) for the location. The upper thin line represents actual daily high temperatures, and the lower thin line represents actual daily low temperatures. On the precipitation graph, the line labeled “normal” represents long-term average precipitation, and the line labeled “13–14” represents actual precipitation. If weather information was not provided, data were taken from a nearby town.

In general, temperatures during the 2013–2014 growing season were below normal for much of the U.S. Several locations reported winter stand losses from cold temperatures and wind desiccation. Drought conditions in the Great Plains delayed planting from 1 to 3 weeks. The spring was challenging because of persistent drought conditions and late-spring freeze events. Precipitation arrived at crop maturity, thus delaying harvest and causing plant regrowth and shattering.

## Test Sites and Results

Twenty-one harvested locations in 15 states are included in this report: Meridianville and Shorter, AL; Fruita and Rocky Ford, CO; Griffin, GA; Vincennes, IN; Belleville, Garden City, and Hutchinson, KS; Cape Girardeau, MO; Mills River and Wallace, NC; Pittstown, NJ; Clovis, NM; Goodwell, OK; Springfield, TN; College Station and Etter, TX; Orange, VA; Alburgh, VT; and Lingle, WY.

Andale, KS and Chillicothe, TX are also included in the publication because differential winterkill was reported at each site.

Twenty-four locations were not published because of poor data quality caused by

inadequate stand establishment, winterkill, herbicide damage, shattering, or other weather-related events.

The “percentage of test average” yield calculation is included in the results. This relative yield calculation allows for some comparison of performance across environments. Entries yielding more than 100% of the test average across multiple locations merit some consideration.

Regional summary tables were created with data from 2009 to 2014. Locations were excluded if yield data were compromised by weather-related events. The locations that were excluded were Meridianville, AL; Rocky Ford, CO; Belleville, Garden City, and Hutchinson, KS; Cape Girardeau, MO; Clovis, NM; and Etter, TX.

Overall, yields were reduced at most locations because of the below-normal winter temperatures. The consistency of yields was not as good as in previous years. Yields were below average in the Great Plains and average in the Midwest and Southeast. One site averaged more than 3,700 lb/acre, but only four others averaged greater than 2,000 lb/acre. All other locations yielded less than 1,800 lb/acre. Canola weighs 50 lb/bushel, so a 2,000 lb/acre yield is 40 bushels/acre.

Caution should be used when evaluating data from locations with coefficient of variation (CV) values greater than 20. Lower values suggest less error was observed at the location. Inestimable differences in soil type, weather, and environmental conditions play a part in increasing experimental error and CV values. Fourteen locations have CV values of greater than 20.

## **Variety Selection**

Winter hardiness is an important trait to consider when selecting a winter canola variety. This trait has been improved, but variability still exists where differential winterkill occurs. Winter canola varieties should show consistent survival across multiple years and locations. Other traits to consider include herbicide resistance, tolerance to carryover from sulfonylurea herbicides, maturity, disease tolerance, yield potential, and oil content. Use more than one year of data to make an informed variety selection decision.

Table 28 provides information on the tolerance of varieties to the blackleg fungus. The 2013–2014 blackleg nursery was lost to poor establishment and winterkill; thus, not all varieties mentioned in this report of progress have blackleg tolerance data available. View Table 29 for seed sources, brand names, and traits of the winter canola varieties and hybrids grown in the NWCVT.

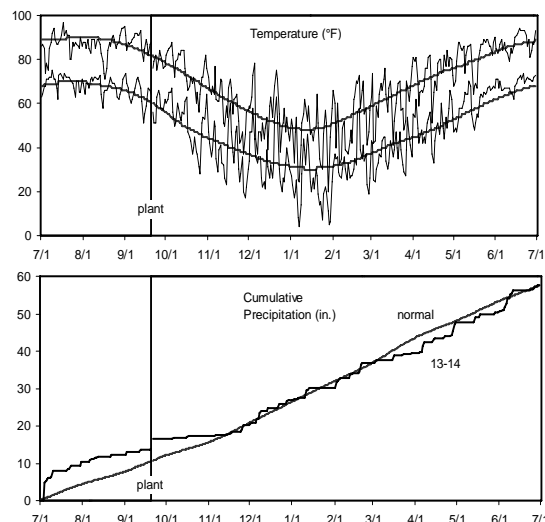

## **Acknowledgments**

This work was funded in part by the Supplemental and Alternative Crops Competitive Grants Program, which is administered by the U.S. Department of Agriculture-National Institute of Food and Agriculture, and the Kansas Agricultural Experiment Station. Assistant scientist Scott Dooley and student workers Joao Alves Da Silva, Emma Gantz, Hillary Henslee, and Jessica Martin assisted with organizing, packaging, planting, harvesting, and data collection. Sincere appreciation is expressed to all participating researchers and seed suppliers who have a vested interest in expanding winter canola acres and increasing production in the U.S.

### Meridianville, Alabama

Ernst Cebert  
Alabama A&M University

Planted: 9/20/2013 in 7-in. rows  
 Harvested: 6/17/2014  
 Herbicides: 2.5 pt/a Trifluralin  
 Insecticides: None  
 Irrigation: None  
 Previous crop: Wheat  
 Soil test: NA  
 Fertilizer: 50-50-50 lb N-P-K fertilizer in fall  
 120-0-0 lb N-P-K fertilizer in spring  
 Soil type: Decatur silty clay loam  
 Elevation: 624 ft Latitude: 34° 35'N  
 Comments: Unusually cold winter but no obvious winterkill. Harvest was delayed by wet weather causing significant shatter loss.

## Orange, Virginia

Wade Thomason and Steve Gulick  
Virginia Tech University

Planted: 9/24/2013 at 5 lb/a in 7-in. rows  
 Harvested: 6/24/2014  
 Herbicides: 1 pt/a Trefflan HP  
 Insecticides: None  
 Irrigation: None  
 Previous crop: NA  
 Soil test: NA  
 Fertilizer: 30-45-45 lb N-P-K fertilizer in fall  
 60-0-0 lb N-P-K fertilizer in spring  
 Soil type: Davidson silty clay  
 Elevation: 510 ft Latitude: 38° 13'N  
 Comments: Colder than normal winter  
 temperatures reduced plant height  
 and yield. A late-spring freeze  
 affected flowering time.

<b>LSD (0.05)</b>	574	473	---	---	---	---	---	4	NS	2.7	2.1	2.1

**Bold:** Superior LSD group. Unless two entries differ by more than the LSD, little confidence can be placed in one being superior to the other.

<sup>1</sup>Use yield data with caution. A CV above 20 indicates higher experimental error. Make variety selection decisions based on more than one year's data.

<sup>2</sup>3-year average includes 2012, 2013, and 2014.

Data averaged over a 6-year period from 2009-2014.

<sup>1</sup>Number of mean observations, not average value of observations per entry.

Vincennes, Indiana

Charles Mansfield  
Vincennes University

Planted: 9/20/2013 at 4 lb/a in 6-in. rows  
 Harvested: 6/25/2014  
 Herbicides: 20 oz/a Treflan  
 Insecticides: 2.75 oz/a Mavrik  
 Irrigation: None  
 Previous crop: Tomato and cantaloupe  
 Soil test: 37-133 ppm P-K  
 Fertilizer: 150-0-0-22 lb N-P-K-S fertilizer in spring  
 Soil type: Lomax loam  
 Elevation: 425 ft Latitude: 38° 44'N  
 Comments: Crop establishment was excellent;  
 however, cold winter temperatures  
 caused some winter kill in many entries.  
 Cool spring weather delayed  
 development.

### Cape Girardeau, Missouri

Indi Braden  
Southeast Missouri State University

Planted: 9/30/2013 at 5 lb/a in 24-in. rows  
Harvested: 6/9 - 6/12/2014  
Herbicides: None  
Insecticides: None  
Irrigation: None  
Previous crop: Cover crop study  
Soil test: NA  
Fertilizer: None  
Soil type: Menfro silt loam  
Elevation: 394 ft      Latitude: 37° 18'N  
Comments: Yields were extremely low, but oil contents were high. Differential winterkill was observed. Only two replications were reported because of weed pressure.

### Springfield, Tennessee

Dennis West  
University of Tennessee

Planted: 9/27/2013  
Harvested: 6/16/2014  
Herbicides: None  
Insecticides: None  
Irrigation: None  
Previous crop: Soybean  
Soil test: NA  
Fertilizer: NA  
Soil type: Crider silt loam  
Elevation: 706 ft      Latitude: 36° 32'N  
Comments: Some winter stand loss in the plot resulted in lower than normal yields. Winter survival reported as spring stand percent. Excellent oil contents reported.

**Table 11. Results for the 2014 National Winter Canola Variety Trial at Springfield, TN**

### Fruita, Colorado

Calvin Pearson  
Colorado State University

Planted: 8/29/2013 in 30-in. rows  
Harvested: 7/10/2014  
Herbicides: 1.5 pt/a Treflan  
Insecticides: None  
Irrigation: Furrow irrigated  
Previous crop: Wheat  
Soil test: NA  
Fertilizer: 50-0-0 lb N-P-K fertilizer in spring  
Soil type: Youngston clay loam  
Elevation: 4604 ft Latitude: 39° 11'N  
Comments: Yields were good but lower than normal. Very high reported oil contents.

### Rocky Ford, Colorado

Jeff Davidson, Mike Bartolo, and Kevin Tanabe  
Colorado State University

Planted: 9/3/2013  
Harvested: 7/8/2014  
Herbicides: 1.5 pt/a Trifluralin 4EC  
Insecticides: None  
Irrigation: 24 in., flood irrigated 6 times  
Fertilizer: 23-96-0 lb N-P-K fertilizer in fall  
92-0-0 lb N-P-K fertilizer in spring  
Soil type: Rocky Ford silty clay loam  
Elevation: 4178 ft Latitude: 38° 02'N  
Comments: Extremely dry conditions at harvest resulted in significant shattering and reduced yields.

**Bold:** Superior LSD group. Unless two entries differ by more than the LSD, little confidence can be placed in one being superior to the other.

<sup>1</sup>Use yield data with caution. A CV above 20 indicates higher experimental error. Make variety selection decisions based on more than one year's data.

Andale, Kansas

Brent Gruenbacher and Mike Patry

Planted: 9/27/2013 at 5 lb/a in 9-in. rows  
 Herbicides: 13 oz/a Assure II  
 Insecticides: None  
 Irrigation: None  
 Previous crop: Wheat  
 Fertilizer: 73-0-0 lb N-P-K fertilizer in fall  
 Soil type: Blanket silt loam  
 Elevation: 1393 ft Latitude: 37° 47'N  
 Comments: A non-uniform seedbed caused variable emergence. Differential winterkill was reported, but the loss of plants caused the plot to be abandoned.

**Bold:** Superior LSD group. Unless two entries differ by more than the LSD, little confidence can be placed in one being superior to the other.

<sup>1</sup>Use yield data with caution. A CV above 20 indicates higher experimental error. Make variety selection decisions based on more than one year's data. Yields adjusted to 9% moisture.

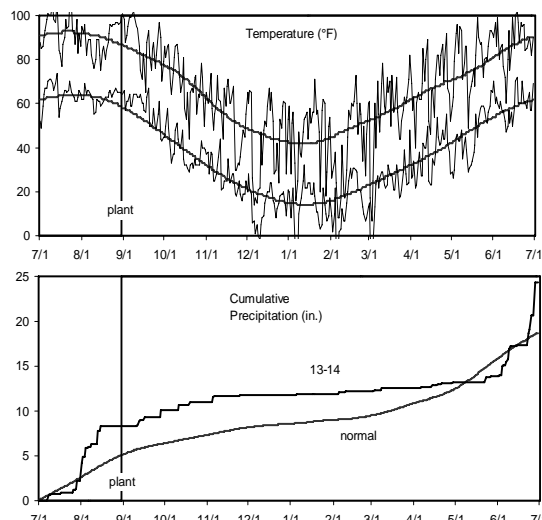

<sup>2</sup>Winter survival rated on a scale of 1=100-80% survival and 5=20-0% survival.

<sup>3</sup>3-year average includes 2012, 2013, and 2014.

### Garden City, Kansas

Johnathon Holman and Scott Maxwell  
Kansas State University

Planted: 8/30/2013 at 5 lb/a in 8-in. rows  
 Harvested: 7/3/2014  
 Herbicides: 3 pt/a Prowl  
 Insecticides: None  
 Irrigation: 15.9 in.  
 Previous crop: Corn  
 Soil test: 92-19-688 ppm N-P-K  
 Fertilizer: 6-26-0-9 lb N-P-K-S fertilizer in fall  
 100-0-0 lb N-P-K fertilizer in spring  
 Soil type: Ulysess-Richfield silt loam  
 Elevation: 2866 ft Latitude: 37° 58'N  
 Comments: Excessive rainfall at harvest caused delays and resulted in seed shatter. Yields have been adjusted for shatter losses.

**Bold:** Superior LSD group. Unless two entries differ by more than the LSD, little confidence can be placed in one being superior to the other.

<sup>1</sup>Use yield data with caution. A CV above 20 indicates higher experimental error. Make variety selection decisions based on more than one year's data. Yields adjusted to 9% moisture.

<sup>2</sup>Winter survival rated on a scale of 1=100-80% survival and 5=20-0% survival.

Clovis, New Mexico

Sangu Angadi and Sultan Begna  
New Mexico State University

Planted: 9/4/2013 at 6 lb/a in 6-in. rows  
Desiccant: Reglone  
Herbicides: 2 pt/a Treflan HFP  
Insecticides: Prevathon, Beleaf, Trimax  
Irrigation: 14 in.  
Previous crop: Fallow  
Soil test: 27-15-344 ppm N-P-K, pH=8.0  
Fertilizer: 75-25-12 lb N-P-K fertilizer in fall  
Soil type: Olton clay loam  
Elevation: 4437 ft Latitude: 34° 36'N  
Comments: A severe hail storm on June 7 reduced yields by about half.

Goodwell, Oklahoma

Rick Kochenower  
Oklahoma State University

Planted: 9/18/2013 at 5 lb/a in 9-in. rows  
Swathed: 6/15/2014  
Harvested: 6/23/2014  
Herbicides: NA  
Insecticides: NA  
Irrigation: 7.5 in.  
Previous crop: NA  
Fertilizer: 200-40-0 lb N-P-K fertilizer in fall  
Soil type: Richfield clay loam  
Elevation: 3239 ft Latitude: 36° 36'N  
Comments: This location provided good yields despite a dry year. Late spring freezes affected the crop April 13-15 and May 1. Hybrids outperformed the open pollinated entries.

Chillicothe, Texas

Paul DeLaune  
Texas AgriLife Research Service

Planted: 9/23/2013 at 5 lb/a in 10-in. rows  
 Herbicides: 4 oz/a Select 2EC  
 Insecticides: None  
 Irrigation: None  
 Previous crop: Wheat  
 Soil test: 35-357 ppm P-K, and pH=7.0  
 Fertilizer: 27-69-0-15-1.5 lb N-P-K-S-Zn fertilizer in fall  
 Soil type: Abilene clay loam  
 Elevation: 1436 ft Latitude: 34° 11'N  
 Comments: The plot was abandoned as a result of severe winterkill.

Etter, Texas

Calvin Trostle  
Texas AgriLife Research and Extension Service

Planted: 9/24/2013  
Harvested: 7/9/2014  
Herbicides: None  
Insecticides: Warrior  
Irrigation: 16 in.  
Previous crop: NA  
Soil test: NA  
Fertilizer: 60-12-0-15 lb total N-P-K-S fertilizer  
Soil type: Sperm clay loam  
Elevation: 3450 ft Latitude: 35° 59'N  
Comments: Planted late. Delayed irrigation resulted in late emergence. Many small seedlings did not survive the winter. Plots did not look good, and yields and oil were reduced.

College Station, Texas

Clark Neely and Daniel Hathcoat  
Texas A&M University

Planted: 10/23/2013  
Harvested: 5/26/2014  
Herbicides: 2 pt/a Treflan, 6 oz/a Select 2EC  
Insecticides: 0.75 pt/a Dimethoate, 1.5 oz/a Declare  
2.8 oz/a Beleaf  
Irrigation: 1.4 in.  
Previous crop: Wheat  
Soil test: 7-63-465 ppm N-P-K, pH=8.0  
Fertilizer: 57-0-0-12 lb N-P-K fertilizer in fall  
Soil type: Clay loam  
Elevation: 267 ft Latitude: 30° 26'N  
Comments: Varieties with a longer vernalization requirement tended to flower later and did not yield as well as early flowering varieties.

<sup>1</sup>Number of mean observations, not average value of observations per entry.

Alburgh, Vermont

Heather Darby  
University of Vermont

Planted: 8/23/2013 at 6 lb/a  
Harvested: 7/30/2014  
Herbicides: None  
Insecticides: 12 oz/a Select Max  
Irrigation: None  
Previous crop: Fallow  
Soil test: NA  
Fertilizer: 70-0-0 lb N-P-K fertilizer in fall  
120-0-0 lb N-P-K fertilizer in spring  
Soil type: Rocky silt loam  
Elevation: 132 ft Latitude: 45° 0'N  
Comments: Cold winter temperatures caused significant winterkill and reduced yields. Oil production was excellent.

<b>LSD (0.05)</b>	862	---	---	---	NS	---	---	NS	NS	---	NS	NS

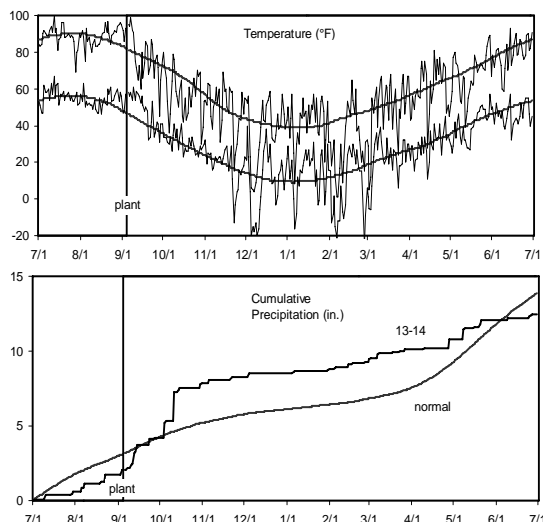

**Bold:** Superior LSD group. Unless two entries differ by more than the LSD, little confidence can be placed in one being superior to the other.

<sup>1</sup>Use yield data with caution. A CV above 20 indicates higher experimental error. Make variety selection decisions based on more than one year's data.

### Lingle, Wyoming

Jerry Nachtman  
University of Wyoming

Planted: 9/4/2013 at 5 lb/a in 14-in. rows  
 Harvested: 7/23/2014  
 Herbicides: 1.5 pt/a Treflan  
 Insecticides: None  
 Irrigation: 0.75-0.80 in. per week mid May - mid July  
 Previous crop: Camelina  
 Soil test: NA  
 Fertilizer: 50-50-20 lb N-P-K fertilizer in fall  
 50-0-0 lb N-P-K fertilizer in spring  
 Soil type: Harverson and McCook loams  
 Elevation: 4197 ft Latitude: 42° 07'N  
 Comments: Despite a cold winter, winter survival was excellent and yields were normal.

<sup>1</sup> Percentage of plants with blackleg measured after harvest.<sup>2</sup> Internal stem decay from blackleg rated on a scale from 0 to 5, where 0 = no disease, 1 = 25% of the stem with decay, 2 = 50% of the stem with decay, 3 = 75% of the stem with decay, 4 = 100% of the stem with decay, 5 = dead plant (from Bradley and Chesrown [2005] Fungicide and Nematicide Reports. 60:FC105. doi:10.1094/FN60).

Blackleg was assessed on the stubble after swathing. Disease incidence and severity were assessed by uprooting plants and examining basal cross-sections of 10 stems per plot.

Temperatures in 2013 were above normal (30-yr. average) from November through January but below normal from January through May. Rainfall was below normal in the fall and mostly above normal from February through April. Over the entire cropping period, rainfall was 15% below normal. Dry conditions in the fall delayed blackleg development, and the leaf spot phase of the disease did not appear until spring 2013. Leaf spots from blackleg became widespread in April during the budding and flowering stages. Blackleg cankers developed on basal areas of most stems near the soil line. Moderate levels were recorded compared with previous trials.

<sup>1</sup> OP = open pollinated, Hyb = hybrid.

<sup>2</sup> SU & SURT = sulfonylurea carryover tolerant; CL = Clearfield (imidazolinone resistant); IMI = imidazolinone carryover tolerant; RR = Roundup Ready; SD = semidwarf.

<sup>3</sup> E = Early; M = Medium; F = Full.

## Senior Authors

Michael Stamm, Dept. of Agronomy, Kansas State University, Manhattan

Scott Dooley, Dept. of Agronomy, Kansas State University, Manhattan

## Other Contributors

Sangu Angadi and Sultan Begna, New Mexico State University,  
Clovis

Brian Baldwin, Mississippi State University, Starkville

Abdel Berrada, Colorado State University, Yellow Jacket

Harbans Bhardwaj, Virginia State University, Petersburg

Indi Braden, Southeast Missouri State University, Cape Girardeau

Joshua Bushong, Oklahoma State University, Stillwater

Brian Caldbeck, Caldbeck Consulting, Philpot, Kentucky

Claire Caldbeck, Rubisco Seeds, Philpot, Kentucky

Ernst Cebert, Alabama A&M University, Normal

Jeff Chandler, North Carolina State University, Mills River

Gary Cramer, Kansas State University, Wichita

John Damicone and Tyler Pierson, Oklahoma State University,  
Stillwater

Heather Darby, University of Vermont, St. Albans

Jeffery Davidson, Mike Bartolo, and Kevin Tanabe, Colorado  
State University, Rocky Ford

Jim Davis and Megan Wingerson, University of Idaho, Moscow

Dennis Delaney, Auburn University, Auburn, Alabama

Paul DeLaune, Texas AgriLife Research Service, Vernon

Eric Eriksmoen, North Dakota State University, Minot

John Garner and Adam Heitman, North Carolina State  
University, Wallace

John Gassett, Mitch Gilmer, H. Jordan, and Gary Ware,  
University of Georgia, Griffin

Nicholas George, University of California-Davis

Brent Gruenbacher and Mike Patry, Andale, Kansas

Todd Higgins, Lincoln University, Jefferson City, Missouri

Johnathon Holman, Kansas State University, Garden City

Burton Johnson, North Dakota State University, Fargo

Jerry Johnson, Colorado State University, Ft. Collins

Rick Kochenower, Oklahoma State University, Goodwell

Kevin Larson, Colorado State University, Walsh

David Lee and Melvin Henninger, Rutgers University,  
Woodstown, New Jersey

Charles Mansfield, Vincennes University, Vincennes

Lloyd Murdock and John James, University of Kentucky,  
Lexington

Jerry Nachtman, University of Wyoming, Lingle

Clark Neely and Daniel Hathcoat, Texas A&M University,  
College Station

Mick O'Neill and Curtis Owen, New Mexico State University,  
Farmington

Calvin Pearson, Colorado State University, Fruita

Charlie Rife, High Plains Crop Development, Torrington,  
Wyoming

Dipak Santra, University of Nebraska-Lincoln, Scottsbluff

Robert Schrock, Kiowa, Kansas

Peter Sexton, South Dakota State University, Brookings

Tyler Thomas, Fly Over States Ag Research, Troy, Kansas

Wade Thomason and Steve Gulick, Virginia Tech University,  
Blacksburg

Calvin Trostle and Jonathan Shockey, Texas AgriLife Extension  
Service, Lubbock

Dennis West, University of Tennessee, Knoxville

Amber Williams, USDA-ARS, Temple, Texas
