Poster Format
(For Internal Usage)**

At this link you can find a MS Powerpoint slide with a leftside banner and the correct proportional dimensions for poster creation for our effort. Obviously, the title at top by Jim Bordovsky is an example that should be modified to your preferences.

<http://www.ksre.k-state.edu/irrigate/cptt/PFormat.pptx>

We encourage you to use this template for all the posters you create that will be appropriate for our outreach efforts related to the project. However, you may have other posters that you have already created or others that for some venues would find this format confusing. Those posters are still fine for usage in our outreach efforts.

This template has dimensions when printed at 600% will produce a poster 69" x 45" that matches the size of the large number of indoor/outdoor poster frames that Freddie Lamm has for usage with our outreach.

All items in the leftside banner have been grouped, so if they need editing they would need to be ungrouped.

We are encouraging the creation of posters on vinyl when that option is available as they are more durable and suitable for outdoor usage.
